REPORT DATE	ANALYST	SERIES	EXCHANGE
26 October 2026	Arthur Faugeron	Infrastructure	NYSE

Executive Summary

Quanta Services is the largest specialty contractor for electric power and energy infrastructure in North America. It converts utility and data center capital budgets into construction revenue, so its fortunes follow the spending plans of its customers more than the prices of its own products. At USD 546.43 the shares trade at 62.6 times trailing earnings after a 30.7 percent fall from the 52-week high.

Business

Quanta designs, builds, upgrades and maintains transmission lines, substations, distribution networks, gas and pipeline systems, and the electrical and mechanical systems of large load centers such as data centers. Utility and Power customers supplied 70 percent of 2025 revenue, the ten largest customers 30 percent and the largest customer 8 percent; about 93 percent of revenue is earned in the United States, with the balance in Canada and Australia.

Financial Condition

FY2025 revenue was USD 28.5bn (up 20.3 percent), operating income USD 1,587m (5.6 percent margin), net income USD 1,028m and diluted EPS USD 6.80. Operating cash flow was USD 2,230m and free cash flow USD 1,517m. Financial debt including leases was USD 6.4bn against cash of USD 0.4bn at year end; net debt including leases was 2.4 times derived EBITDA of USD 2,497m. Backlog reached USD 53.4bn at 30 June 2026 and management guides FY2026 revenue to USD 39.3bn to 39.7bn.

Market Position

Direct listed competitors include MasTec, EMCOR, Primoris and MYR Group, plus utility in-house crews and private regional contractors. Quanta’s revenue of USD 32.9bn over the last twelve months is roughly twice that of the next largest listed peer in this set, which gives it procurement scale, a large skilled workforce of about 69,500 people and bonding capacity of about USD 14.9bn outstanding. The weakness is margin: operating margin of 5.6 percent is thin for a company valued at 29 times EBITDA.

Valuation

Market capitalisation is USD 82.2bn and enterprise value USD 88.2bn. Trailing P/E is 62.6, forward P/E 29.4, EV/EBITDA 29.0 and P/FCF 35.9 (StockAnalysis, 23 October 2026). Price to sales is 2.5. Peers trade at 20.2 to 27.2 times trailing earnings and 16.1 to 19.8 times forward earnings.

Investment Framework

WHAT IS ATTRACTIVE	Revenue compounded at 21.7 percent a year from FY2021 to FY2025, backlog of USD 53.4bn covers about 1.4 years of FY2025 revenue, free cash flow has exceeded net income for four consecutive years, and the customer base is concentrated in regulated utilities with multi-year capital plans.
WHAT IS CONCERNING	Operating margin has moved only from 4.9 to 5.6 percent over four years, receivables equal 107 days of revenue, goodwill and intangibles are 41 percent of total assets, and the share count has risen despite buybacks.
WHAT MUST GO RIGHT	Utility and data center spending must keep growing at the rate embedded in the FY2026 guidance (revenue up about 39 percent), while the Electric segment holds an operating margin near 11 percent and acquisitions are integrated without margin dilution.
WHAT COULD BREAK THE THESIS	A pause in data center or utility capital programmes, a loss on a large fixed-price project, a working-capital squeeze, or de-rating of the multiple toward peer levels.
PRICED IN	The market price sits at or above the bull case of the DCF in this report (USD 524 per share) and well above the base case (USD 375), so the shares discount sustained double-digit growth and margin expansion for a decade.

Investment Profile

ASSESSMENT BY DIMENSION

Dimension	Assessment
Business quality	Good. Asset-light relative to utilities, recurring master service agreements, but project-based and labour dependent
Financial quality	Good. Cash conversion above 100 percent of net income, modest leverage, thin margins
Competitive position	Strong in scale and skilled labour; moderate moat overall
Growth profile	Very high. Revenue up 20.3 percent in FY2025 and guided up about 39 percent in FY2026, part acquired
Balance-sheet risk	Moderate. Net debt 2.4 times EBITDA including leases, rising with acquisitions
Valuation	Demanding. Trades above peers and above the base-case DCF range
Market and technical profile	High beta and volatility; oversold short term, well below recent highs

Source: analyst assessment based on the data in this report.

A. About the Business

A1. Business Environment

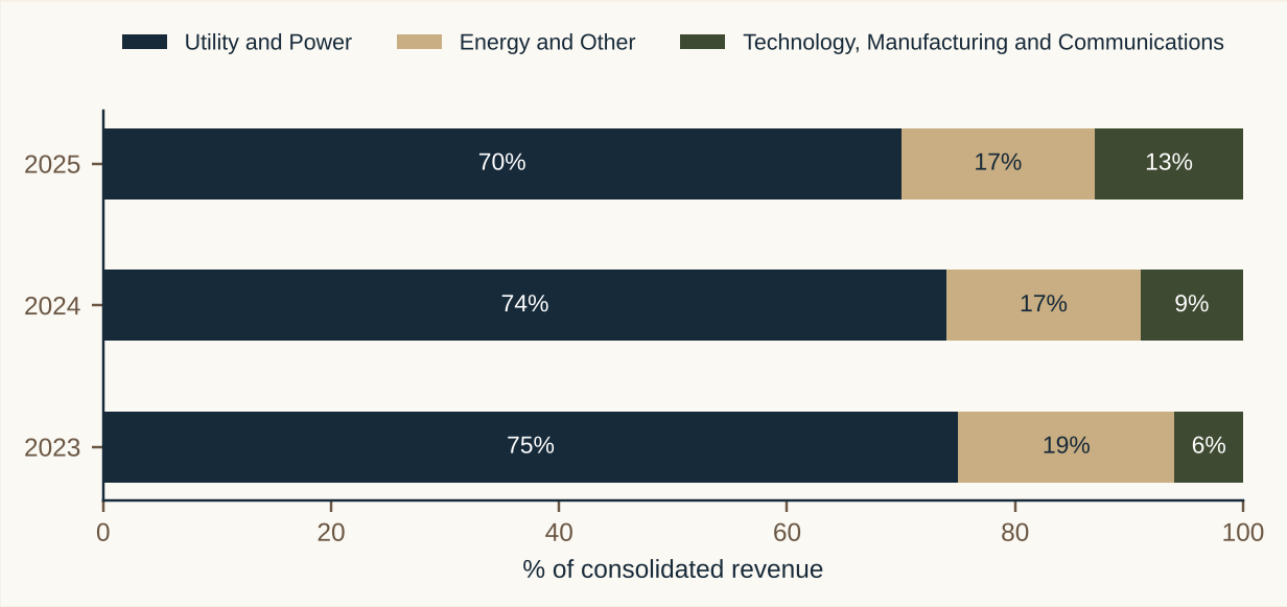

Quanta operates in specialty contracting for electric power, energy and communications infrastructure. The value chain begins with the owner of the asset (investor-owned utilities, independent power producers, pipeline operators, data center developers), which funds a capital programme; engineering firms and equipment makers (transformers, breakers, conductor, steel, copper) supply designs and materials; and contractors such as Quanta supply labour, equipment and construction management. Roughly 20 percent of Quanta’s work is subcontracted, and materials are frequently supplied by the customer, which keeps Quanta’s revenue closer to labour and services than to commodities.

Demand is driven by utility capital expenditure. S&P Global Market Intelligence projects US investor-owned utility capital spending near USD 1.3 trillion over 2026 to 2030, and the Edison Electric Institute projected more than USD 1.1 trillion for 2025 to 2029. The Utility Dive report on that projection cites McKinsey estimates of data center demand rising about 20 percent

a year between 2023 and 2030. Revenue pools are labour and equipment margin on construction (gross margins of 14 to 15 percent for Quanta), with cost pools in craft labour, subcontractors, fuel and equipment depreciation.

Industry economics are characterised by low fixed-asset intensity compared with utilities (Quanta's capital expenditure is 2.5 percent of revenue), high working-capital needs because customers pay on milestones, bonding requirements, and a dependence on skilled linemen and electricians that cannot be scaled quickly. Barriers to entry are low for small work and high for large transmission, substation and mission-critical projects where bonding, safety record and crew depth decide awards. Listed competitors are fragmented: the five companies in this report span USD 4bn to USD 33bn of revenue, while thousands of private firms compete locally.

Quanta revenue by end market, 2023 to 2025

Source: Quanta Services Form 10-K for FY2025. Units: percent of consolidated revenue.

INDUSTRY STAGE: GROWING AND STRUCTURALLY TRANSFORMING, WITH CYCLICAL EXPOSURE

> The sector is in a multi-year capital upcycle driven by load growth (data centers, electrification, manufacturing reshoring), ageing grid assets and generation additions. It is structurally transforming because demand is shifting from maintenance towards new build, but it remains cyclical because the spending is discretionary at the margin and depends on utility rate cases, interest rates and the investment plans of technology companies. Technology, Manufacturing and Communications rose from 6 percent of Quanta revenue in 2023 to 13 percent in 2025, the segment most exposed to technology capital budgets.

A2. What Does the Company Do?

Quanta Services, founded in 1997 and headquartered in Houston, Texas, reports two segments. Electric covers power grid, power generation and large load center work and includes a 50 percent equity interest in LUMA, the operator of Puerto Rico's transmission and distribution system. Underground and Infrastructure covers gas utility, pipeline, downstream industrial, civil and mechanical and plumbing work for large load centers. In Q2 2026 Electric produced USD 7,838m of revenue and USD 898m of operating income (11.5 percent margin) while Underground and Infrastructure produced USD 1,719m and USD 156m (9.1 percent margin); Electric is therefore 82 percent of revenue and 85 percent of segment operating income.

Contracts are a mix of master service agreements for recurring maintenance and capital programmes, unit-price, cost-plus and fixed-price construction contracts. Fixed-price work carries execution risk: at 31 December 2025 Quanta had recognised USD 983.6m of unapproved change orders and claims, and about USD 14.9bn of performance bonds were outstanding. Operating

costs are craft and salaried labour (about 55,700 hourly and 13,800 salaried employees at 31 December 2025, 36 percent under collective bargaining), a fleet of about 80,000 owned and leased units, subcontractors, insurance and materials.

How one dollar of revenue is used

Using FY2025 reported figures, of each dollar of revenue 85.0 cents is cost of services, 9.4 cents is selling, general and administrative and other operating cost, and 5.6 cents is operating income; after interest, tax and other items 3.6 cents is net income. Operating cash flow was 7.8 cents, capital expenditure 2.5 cents and free cash flow 5.3 cents of each dollar.

1. CUSTOMER
Utilities, power developers, data center owners, pipelines, industrial and communications clients

2. PRODUCT AND SERVICE
Design, construction, upgrade and maintenance of grid, generation, load center and pipeline assets

3. REVENUE
FY2025 USD 28.5bn; Electric about 82 percent in Q2 2026

4. COSTS
Cost of services 85.0 cents per dollar: labour, subcontractors, equipment

5. OPERATING PROFIT
5.6 cents per dollar of revenue (FY2025)

6. CASH FLOW
Operating cash flow 7.8 cents, free cash flow 5.3 cents

7. CAPITAL ALLOCATION
Acquisitions USD 3.1bn, buybacks USD 247m, dividends USD 60m in FY2025

The economically important parts are the Electric segment (the margin and growth engine), the working-capital cycle (receivables of USD 8.4bn exceed the entire equity base) and acquisitions, which absorbed USD 8.1bn of cash over FY2021 to FY2025 compared with cumulative free cash flow of USD 5.0bn.

A3. Business and Relationship Network

ECOSYSTEM MAP

Node	Relationship	Why it matters economically
Electric segment	Transmission, distribution, substations, renewables, generation and large load center electrical work	82 percent of Q2 2026 revenue; the margin driver
Underground and Infrastructure	Gas utility, pipeline, industrial, civil, mechanical and plumbing	Diversifies away from power; lower margin (9.1 percent in Q2 2026)
Utility customers	AEP, Duke Energy, Exelon, NextEra, PG&E, Xcel Energy named as representative customers	Ten largest customers are 30 percent of revenue; the largest is 8 percent
Technology and industrial customers	Data center, manufacturing and communications clients	13 percent of 2025 revenue and the fastest-growing end market
Suppliers	Steel, copper, aluminium, transformers, breakers, wire, solar panels, batteries	Often customer-furnished; shortages delay projects and revenue timing
Subcontractors	About 20 percent of work is subcontracted	Gives flexible capacity, but they may also become competitors
Labour	About 69,500 employees; 36 percent under collective bargaining agreements	Skilled labour is the binding constraint on growth
LUMA and acquired businesses	50 percent interest in LUMA; Dynamic Systems (DSI) and seven other 2025 acquisitions	Acquisitions added USD 3.1bn of cash outflow in FY2025
Competitors	MasTec, EMCOR, Primoris, MYR Group, utility in-house crews, private contractors	Compete for projects, crews and bonding capacity

Source: Quanta Services Form 10-K for FY2025; Quanta Services second quarter 2026 earnings release.

A4. Competition

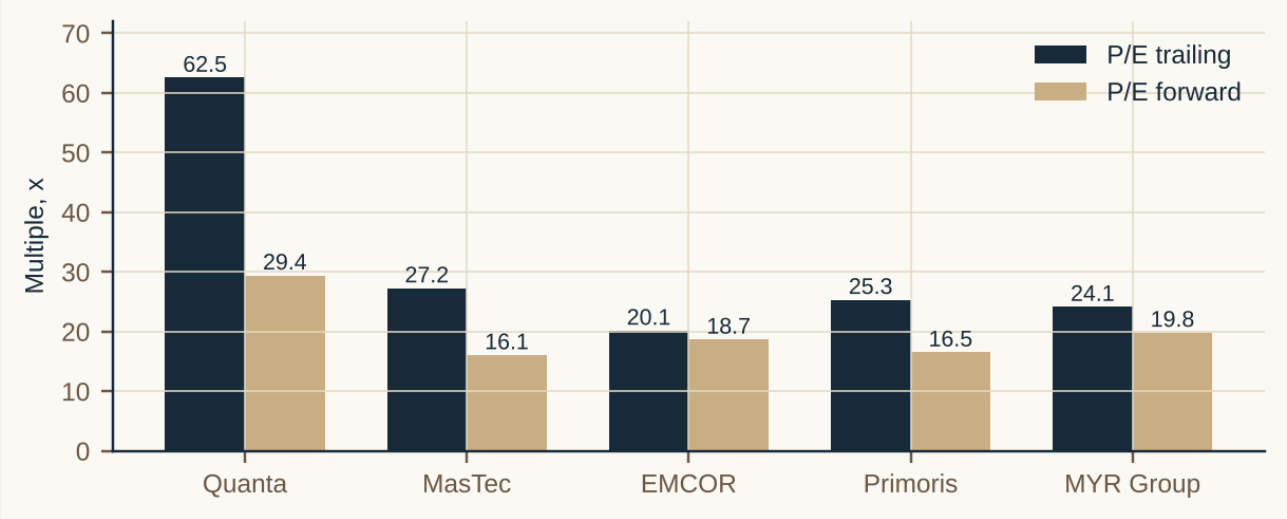

Peers were selected because they bid for the same customers, crews and bonding capacity: MasTec (pipelines, power delivery, clean energy and communications construction), EMCOR (mechanical and electrical contracting, increasingly for data centers), Primoris (utilities, energy and pipeline construction) and MYR Group (transmission, distribution and commercial electrical contracting). Utility in-house service organisations are indirect competitors, subcontractors are emerging competitors, and equipment makers are complements rather than substitutes.

COMPETITIVE COMPARISON, USD (TRAILING TWELVE MONTHS TO LATEST REPORT)

Company	Revenue, bn	Net margin	Mkt cap, bn	P/E	Fwd P/E	Beta
Quanta (PWR)	32.9	4.0%	82.2	62.6x	29.4x	1.27
MasTec (MTZ)	16.1	3.1%	13.6	27.2x	16.1x	1.84
EMCOR (EME)	18.6	7.7%	28.6	20.2x	18.7x	1.12
Primoris (PRIM)	7.3	1.9%	3.5	25.3x	16.5x	1.44
MYR Group (MYRG)	4.0	4.1%	4.0	24.1x	19.8x	1.32

Source: StockAnalysis company pages, prices at close 23 October 2026. Net margin is calculated as trailing net income divided by trailing revenue. Peer EV/EBITDA is not retrieved and is omitted rather than estimated.

Trailing and forward price to earnings, Quanta and selected peers

Source: StockAnalysis, close 23 October 2026. Units: multiple of earnings per share.

Quanta is about 1.8 times the revenue of EMCOR and 2.0 times MasTec, yet its net margin of 4.0 percent is half that of EMCOR. The valuation gap is therefore not explained by profitability; it reflects the market's preference for Quanta's exposure to utility and data center grid spending and its record of growth.

A5. Competitive Differences

Advantages: scale (the largest contractor in the group by revenue), a skilled workforce that competitors cannot replicate quickly, bonding capacity and safety record that qualify it for the largest transmission and substation programmes, a diversified fleet and equipment base, long-standing master service agreements with utilities, and the capacity to acquire (USD 8.1bn deployed in five years). Disadvantages: thin gross margin (15.0 percent in FY2025) with no pricing power in a labour-intensive business, project concentration risk on fixed-price work, dependence on the capital plans of a limited set of customers (ten customers are 30 percent of revenue), working-capital intensity, and reliance on acquisitions to sustain growth.

Switching costs are moderate: utilities qualify contractors through safety and performance records, which favours incumbents, but they can rebid work. Network effects and intellectual property are minimal. The advantages that are structural are scale

in skilled labour and bonding; the advantages that are temporary are the current shortage of capacity in the industry, which supports pricing and backlog.

MOAT ASSESSMENT: MODERATE

> Return on invested capital of 9.1 percent in FY2025 (source calculation) is only modestly above a plausible cost of capital of 8 to 9 percent, which does not indicate a wide economic moat. The moat rests on scale, qualification and labour, which protect market share and volume but not margins; consolidated operating margin has widened by only 0.7 percentage points over four years.

A6. Industry Trend

Historical growth in utility capital spending has accelerated: EEI reported USD 1.3 trillion of investor-owned utility capital expenditure over 2015 to 2024 and projected more than USD 1.1 trillion for 2025 to 2029 alone, and S&P Global Market Intelligence put 2026 to 2030 near USD 1.3 trillion. Demand drivers are data center and manufacturing load growth, grid hardening, interconnection of new generation (utilities added 52 GW of generating capacity in 2024, up 11 percent from 2023) and the replacement of ageing assets. Supply constraints are skilled labour, transformers and switchgear, and permitting.

The trend is classified as growing and cyclical. Structural elements are electrification, grid modernisation and ageing assets, which support spending for many years. Temporary elements are the pace of data center construction, the supply of equipment, and low-cost financing. The trend could reverse if technology companies cut data center capital expenditure, regulators resist rate increases, interest rates rise sharply, or federal energy policy changes tax incentives for generation. Quanta’s share price fell 30.7 percent from its May 2026 peak to 23 October 2026 while fundamentals reported on 30 July 2026 were strong, which shows how quickly the market re-rates these expectations.

A7. Management

EXECUTIVE TEAM

Name	Position	Background
Earl C. Austin Jr.	President, CEO and Director	Leads the company; career history and tenure Not Retrieved
Jayshree S. Desai	Chief Financial Officer	Responsible for finance and capital structure; background Not Retrieved
Donald C. Wayne	EVP and General Counsel	Legal and governance
Gerald A. Ducey Jr.	President of Strategic Operations	Operations strategy
Karl W. Studer	President of Electric Power	Leads the largest segment
Scot Fluharty	President of Underground Utilities and Industrial	Leads the second segment

Source: StockAnalysis company profile for PWR, accessed 26 October 2026. Ownership and insider holdings are Not Retrieved.

Management is evaluated on observable behaviour. Capital allocation has favoured acquisitions: USD 8.1bn of cash acquisitions over FY2021 to FY2025 versus USD 0.86bn of buybacks and USD 0.24bn of dividends, so about 88 percent of cash returned or deployed went to deals. The share count rose from 142.6m to 149.6m (up 4.9 percent) despite buybacks, which indicates that equity compensation and acquisition consideration outweighed repurchases, and diluted EPS growth (19.5 percent a year) trailed net income growth (20.6 percent). Stock-based compensation is modest at 0.6 percent of revenue. The dividend of USD 0.44 per share is a payout of 5.9 percent of FY2025 net income, so shareholders are primarily rewarded through price appreciation rather than income. Debt management has been disciplined: net debt including leases fell from 3.6 times EBITDA in FY2021 to 1.8 times in FY2024, then rose to 2.4 times in FY2025 as acquisitions accelerated. Guidance record is not evaluated here because prior guidance figures were not retrieved; the FY2026 guidance was raised to USD 39.3bn to 39.7bn of revenue in the July 2026 release.

B. Evaluation

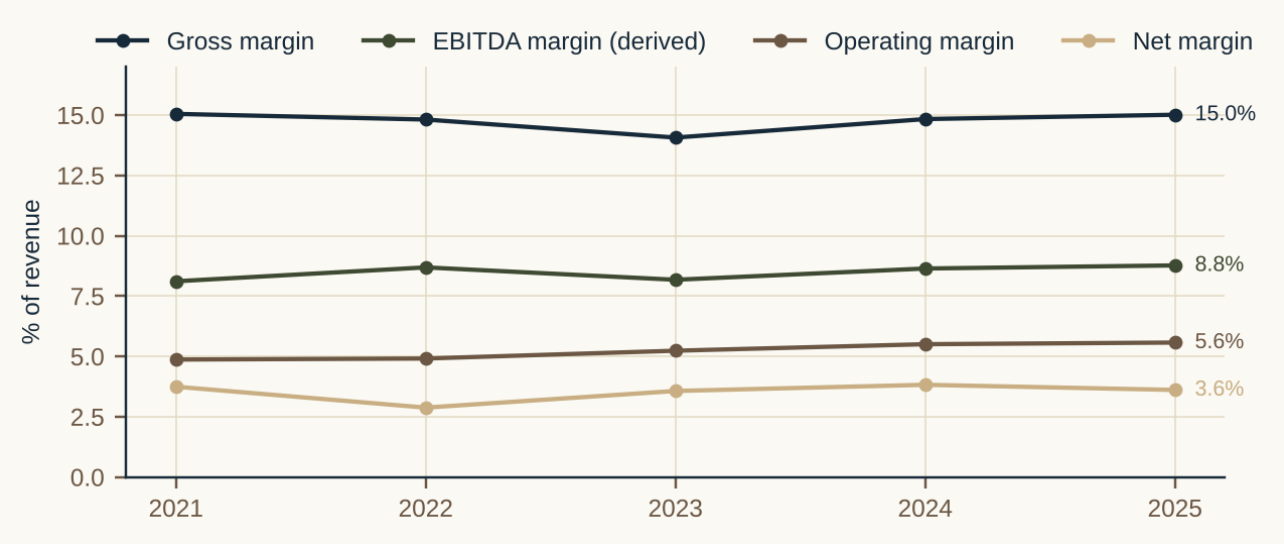

B1. Financial and Operating Metrics

PROFITABILITY, GROWTH AND RETURNS, FY2021 TO FY2025 (PERCENT)

Metric	FY2021	FY2022	FY2023	FY2024	FY2025
Revenue growth	N/A	31.5%	22.3%	13.4%	20.3%
Gross margin	15.0%	14.8%	14.1%	14.8%	15.0%
EBITDA margin (derived)	8.1%	8.7%	8.2%	8.6%	8.8%
Operating (EBIT) margin	4.9%	4.9%	5.2%	5.5%	5.6%
Net margin	3.7%	2.9%	3.6%	3.8%	3.6%
Return on equity	10.4%	9.7%	12.9%	13.6%	12.7%
Return on invested capital	6.9%	6.8%	9.2%	9.7%	9.1%
Return on assets	3.7%	4.0%	4.6%	4.7%	4.5%

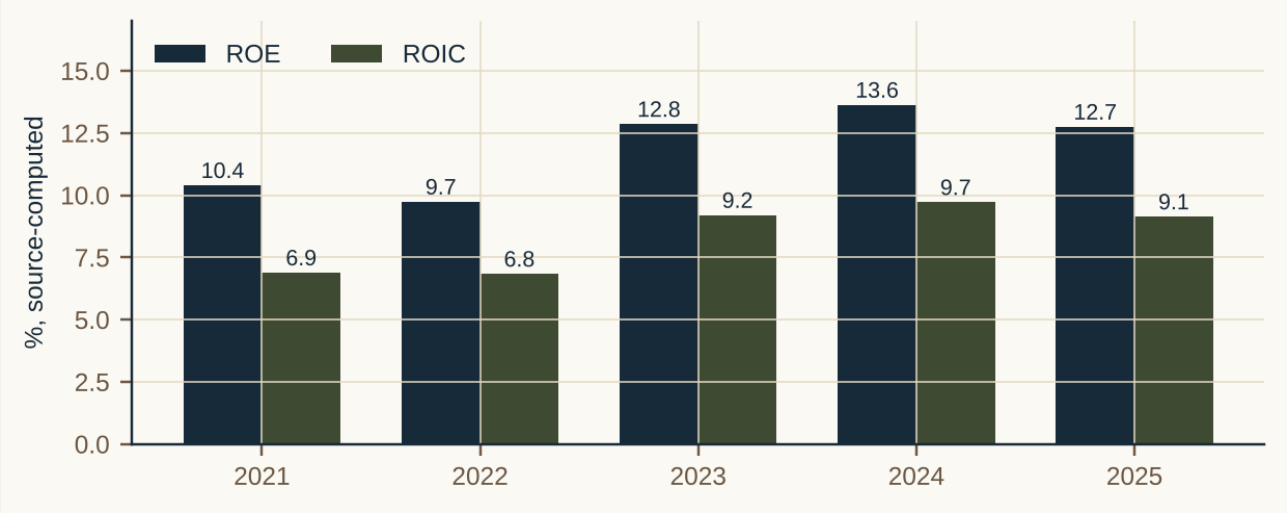

Source: StockAnalysis financial statements and ratios for PWR; margins and growth calculated from reported figures. EBITDA is derived as operating income plus depreciation and amortisation. ROE, ROA and ROIC are the data provider's calculations.

Quanta margins, FY2021 to FY2025

Source: StockAnalysis annual financial statements; EBITDA derived. Units: percent of revenue. Period: fiscal years ending 31 December.

Return on equity and return on invested capital, FY2021 to FY2025

Source: StockAnalysis ratios page. Units: percent.

Compound annual growth from FY2021 to FY2025 was 21.7 percent for revenue, 24.1 percent for derived EBITDA, 25.9 percent for operating income, 20.6 percent for net income and 19.5 percent for EPS. Free cash flow grew 66.7 percent a year, but that figure is distorted by an unusually low FY2021 base (USD 197m). Incremental operating margin was between 5.0 and 7.5 percent each year, so operating leverage is positive but small. Efficiency: receivables days rose from 98 in FY2024 to 107 in FY2025 (118 in FY2021), asset turnover fell from 1.27 to 1.14 as acquired goodwill and intangibles grew, and inventory is immaterial (5.6 days of cost of services).

LEVERAGE, LIQUIDITY AND CASH FLOW METRICS

Metric	FY2021	FY2022	FY2023	FY2024	FY2025
Net debt incl. leases, USD m	3,773	3,547	3,174	3,737	5,980
Net debt / EBITDA incl. leases	3.6x	2.4x	1.9x	1.8x	2.4x
Debt / EBITDA (provider)	2.1x	1.6x	1.5x	1.3x	1.6x
Debt / equity (provider)	0.78	0.74	0.71	0.61	0.71
Current ratio (provider)	1.50	1.63	1.47	1.30	1.14
Free cash flow margin	1.5%	4.1%	5.5%	6.2%	5.3%
Operating cash flow / net income	1.20x	2.30x	2.12x	2.30x	2.17x
Capex / revenue	3.0%	2.5%	2.1%	2.5%	2.5%

Source: StockAnalysis balance sheet, cash flow statement and ratios pages. Net debt is financial debt plus lease liabilities minus cash, calculated. Interest coverage is Not Retrieved because interest expense was not available from the sources used.

Operating cash flow exceeds net income by 2.2 times because depreciation and amortisation (USD 910m in FY2025) and stock compensation (USD 182m) are non-cash charges. Current ratio has fallen from 1.63 to 1.14 as the current portion of long-term debt rose to USD 676m.

B2. Risks

RISK REGISTER RANKED BY PROBABILITY TIMES IMPACT

Rank	Risk	Probability	Impact	Description
1	Valuation compression	High	High	62.6x trailing earnings and 29.0x EV/EBITDA versus peers at 16x to 19x forward earnings; a move to peer multiples implies a large price decline even with no earnings miss
2	Capital programme slowdown	Medium	High	Utility and Power is 70 percent of revenue and data center work is growing; a pause in technology capital expenditure or a rate-case setback would cut backlog conversion
3	Fixed-price execution and claims	Medium	High	USD 983.6m of unapproved change orders and claims recognised at end 2025; bonds of USD 14.9bn outstanding; large-project losses would hit margin
4	Working capital and credit	Medium	Medium	Receivables of USD 8.4bn (107 days) fund a growing business; delayed customer payment would raise debt
5	Acquisition integration and leverage	Medium	Medium	USD 3.1bn acquisitions in FY2025; goodwill USD 7.3bn is 81 percent of equity; impairment risk if returns fall short
6	Labour availability and cost	Medium	Medium	69,500 employees, 36 percent unionised; wage inflation or shortages limit growth
7	Interest rates	Medium	Medium	USD 6.1bn of debt at 30 June 2026 and rate-sensitive utility clients
8	Regulation and policy	Medium	Medium	Permitting, tariffs on equipment and changes to energy incentives influence project timing
9	Technology disruption and cybersecurity	Low	Medium	Automation could reduce labour intensity, which would reduce moat; operational technology cyber risk to client systems

Source: analyst assessment using data from Quanta Services Form 10-K for FY2025 and StockAnalysis.

The three risks most capable of permanently impairing shareholder value are valuation compression combined with an earnings reset (rank 1), a prolonged slowdown in the capital programmes that feed backlog (rank 2) and large losses on fixed-price work (rank 3). Leverage is not a near-term threat: net debt is 2.4 times EBITDA including leases.

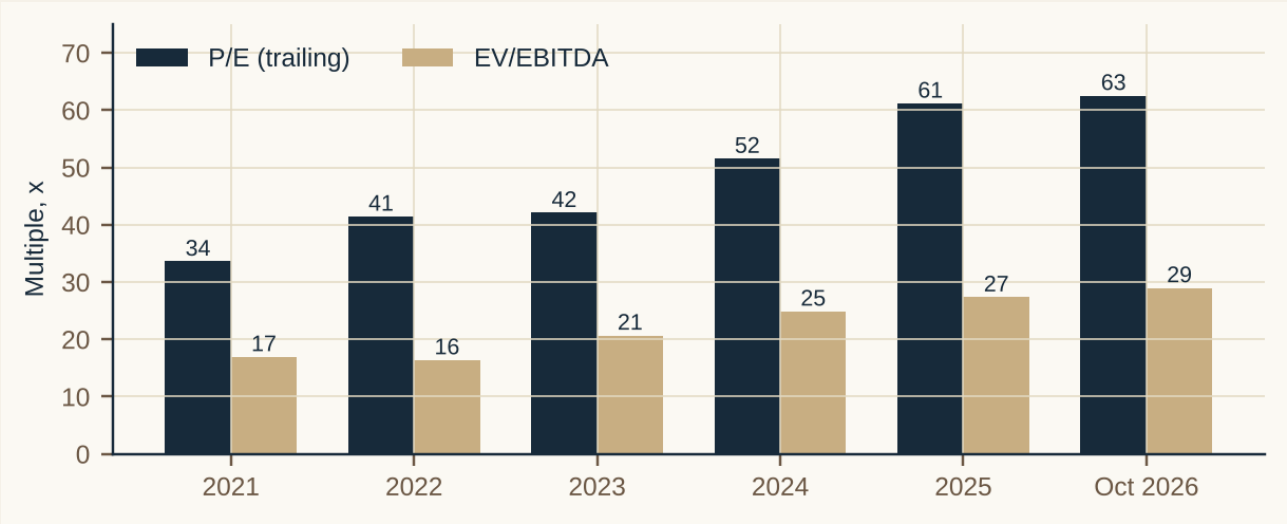

B3. Valuation

VALUATION MULTIPLES AT 23 OCTOBER 2026 AND FISCAL YEAR ENDS

Multiple	Current	FY2025	FY2024	FY2023	FY2022	FY2021
Market cap, USD bn	82.2	62.9	46.7	31.4	20.4	16.3
Enterprise value, USD bn	88.2	68.4	50.9	35.3	24.3	17.8
P/E (trailing)	62.6x	61.2x	51.6x	42.1x	41.5x	33.6x
Price / sales	2.50x	2.21x	1.97x	1.50x	1.19x	1.26x
EV / EBITDA	29.0x	27.4x	24.9x	20.7x	16.4x	17.0x
EV / EBIT	43.8x	43.1x	39.1x	32.3x	29.0x	28.2x
P/FCF	35.9x	41.5x	31.6x	27.5x	29.0x	83.1x

Source: StockAnalysis ratios page for PWR. Fiscal year multiples use year-end market capitalisation. Forward P/E of 29.4x is the data provider's figure (consensus-based); on FY2026 guidance midpoints the price is 46.8 times GAAP EPS (USD 11.67) and 32.7 times adjusted EPS (USD 16.70), calculated.

Quanta trailing P/E and EV/EBITDA, FY2021 to October 2026

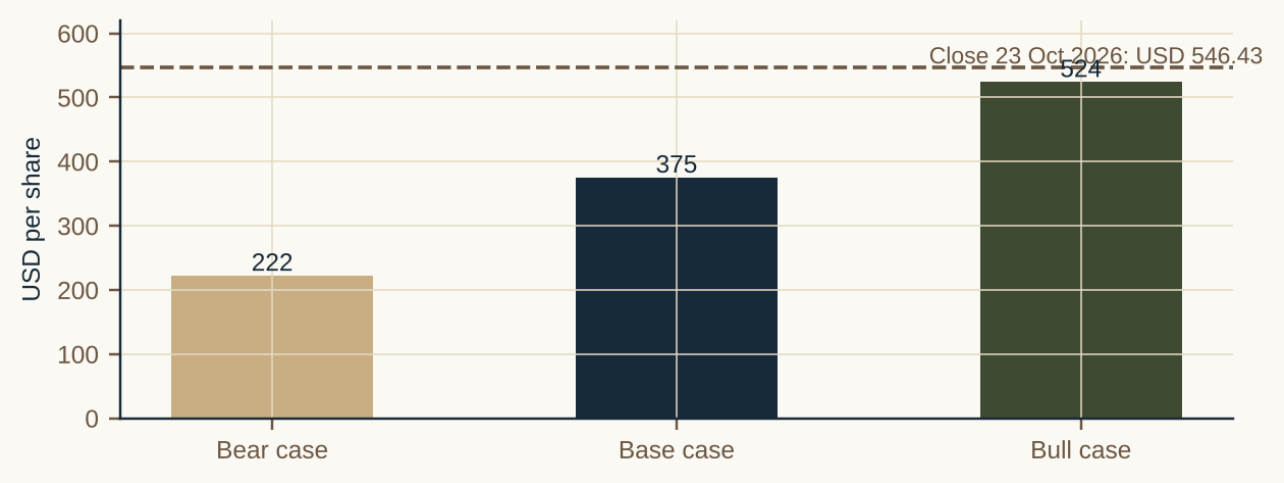

Source: StockAnalysis ratios page. Units: multiple. EV/EBITDA uses the provider's EBITDA definition.

Trailing EV/EBITDA has expanded from 16.4 times (FY2022) to 29.0 times, a 77 percent increase, while EBITDA grew 68 percent between FY2022 and FY2025; the stock's return over that period was therefore driven about equally by earnings growth and multiple expansion. Quanta's multiple is above its own five-year range and above each peer retrieved. PEG is not computed because forward growth consensus was not retrieved.

What the price implies

The DCF in section C5 provides a range of USD 222 (bear) to USD 524 (bull) per share with a base case of USD 375. At the close of USD 546.43 the share price is above even the bull case at an 8.5 percent WACC. To justify the price at base-case operating assumptions requires a WACC near 7.5 percent and terminal growth of 3.5 to 4.0 percent. The market is therefore pricing in revenue growth sustained above 10 percent for the rest of the decade, an EBITDA margin (after stock compensation) of more than 11 percent, and a decade of strong acquisition-assisted growth. This expectation appears optimistic rather than extremely optimistic because the customers' declared capital plans and USD 53.4bn of backlog provide visibility, but it leaves little margin for error.

DCF value per share by scenario versus the closing price

Source: analyst model, section C5; closing price from StockAnalysis, 23 October 2026. Units: USD per share. WACC 8.5 percent, terminal growth 3.0 percent.

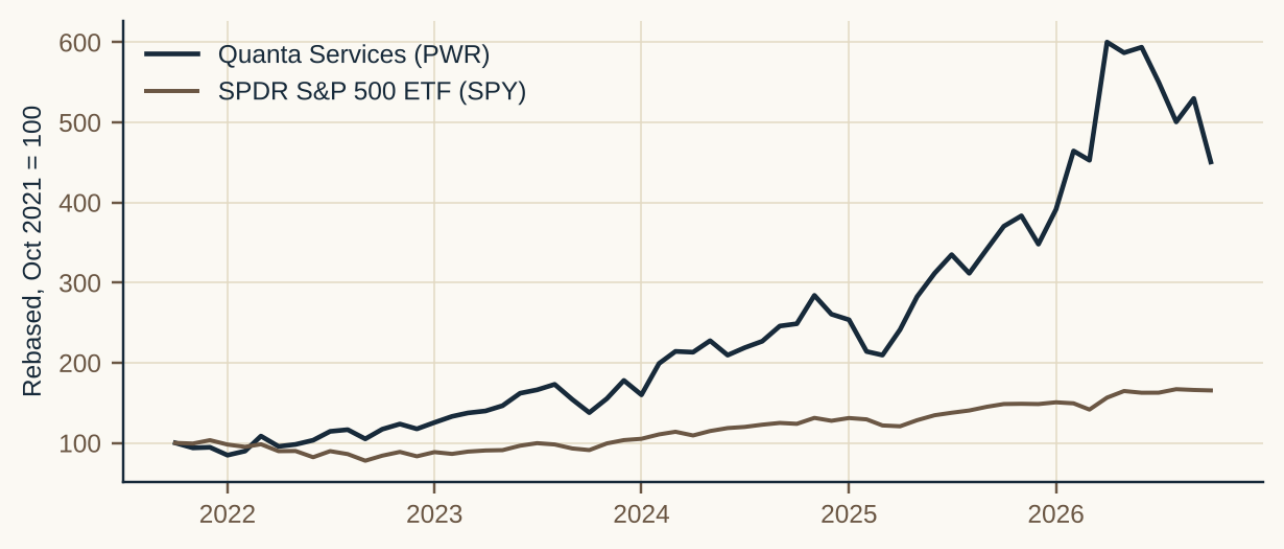

B4. Capital Market and Stock Analysis

PRICE RETURNS VERSUS THE S&P 500 (SPY), TO 23 OCTOBER 2026

Period	PWR	SPY	Relative
1 day (22 to 23 October)	-1.1%	N/A	N/A
1 week (16 to 23 October)	-13.5%	N/A	N/A
1 month (from 30 September)	-15.0%	-0.3%	-14.7 pts
3 months (from 31 July)	-18.1%	1.7%	-19.8 pts
6 months (from 30 April)	-24.9%	5.7%	-30.6 pts
Year to date (from 31 December 2025)	29.5%	11.4%	18.1 pts
1 year (from 31 October 2025)	21.7%	11.4%	10.3 pts
3 years (from 31 October 2023)	227.0%	81.7%	145.3 pts
5 years (from 29 October 2021)	350.6%	65.5%	285.1 pts

Source: Alpha Vantage monthly closing prices for PWR and SPY; StockAnalysis daily closes for the one-day and one-week returns. Price returns exclude dividends. Annualised five-year price CAGR is 35.1 percent for PWR and 10.6 percent for SPY.

Quanta versus the S&P 500 ETF, rebased to 100

Source: Alpha Vantage monthly closing prices. Period: October 2021 to 23 October 2026. Units: index, October 2021 = 100.

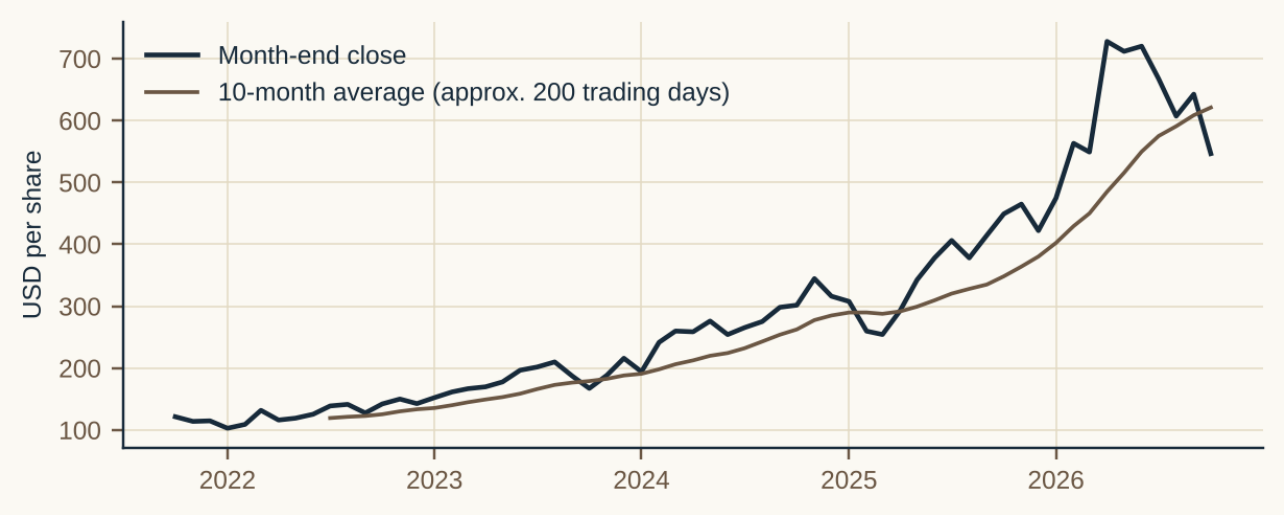

Quanta has outperformed the index by a wide margin over three and five years, but all of the relative strength in 2026 was earned before May: the stock peaked at USD 788.75 intraday in May 2026, closed at USD 720.04 on 30 June and has since lost 24.1 percent. The decline accelerated in the last two weeks: a drop of 8.1 percent on 22 October (USD 601.14 to USD 552.44) occurred on volume of 1.96m shares, about 1.5 times the recent daily average, and no company-specific announcement explaining it was retrieved.

VOLATILITY AND RISK

Measure	Value	Basis
Annualised volatility, PWR	34.8%	Calculated, 60 monthly returns to October 2026
Annualised volatility, SPY	15.6%	Calculated, same period
Downside deviation, PWR (annualised)	18.1%	Calculated, target return zero

Maximum drawdown, SPY	-24.8%	Month-end closes, December 2021 to September 2022
Decline from 52-week high	-30.7%	USD 788.75 intraday high to USD 546.43 close

Source: Alpha Vantage monthly prices; StockAnalysis. Drawdowns measured on month-end closes understate intramonth declines.

Quanta month-end close with 10-month average

Source: Alpha Vantage monthly prices. Period: October 2021 to 23 October 2026. Units: USD per share.

Technical structure: the close of USD 546.43 is 14.8 percent below the 50-day average of USD 641.62 (calculated from the 50 most recent daily closes) and 12.0 percent below the 10-month average of USD 620.97, which approximates the 200-day average. Both are falling or flat, which defines a short-term downtrend within a long-term uptrend. The 14-day RSI, calculated from daily closes, is 23.7, in oversold territory, which signals that selling pressure has been extreme but not that a reversal is due. The January 2026 low of USD 408.36 and the 52-week high of USD 788.75 mark the range; the October low of USD 527.07 on 23 October is the nearest support. MACD and ATR were not retrieved. These indicators describe sentiment and momentum, not value: the fundamental valuation in section B3 is independent of them, although a stock with a beta of 1.3 and 35 percent volatility can move 10 percent in a few sessions in either direction. Quanta's next earnings release is scheduled for 29 October 2026, which is a near-term catalyst for volatility.

C. Financial Statements

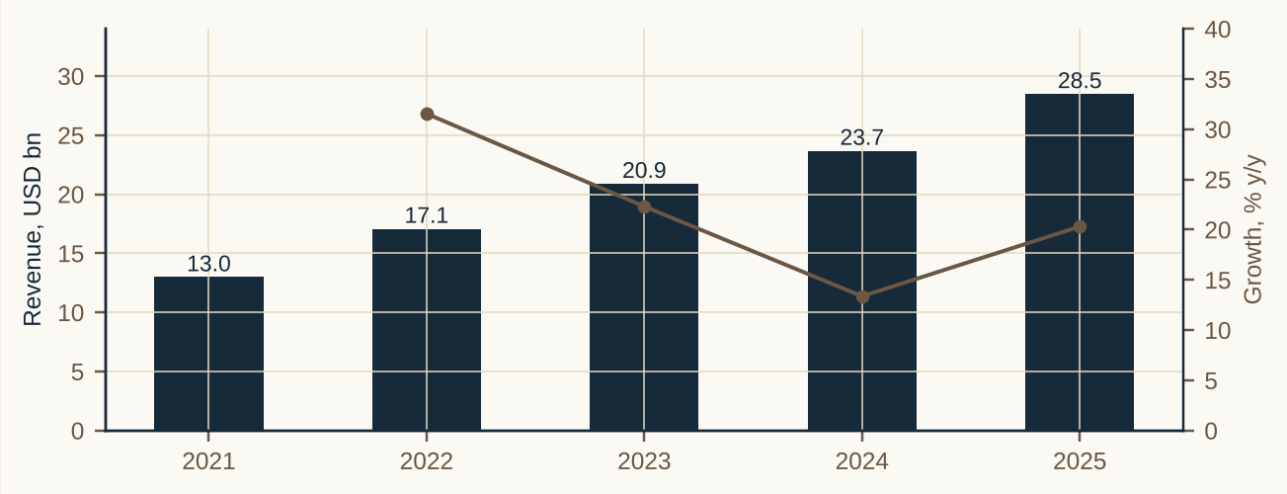

C1. Income Statement

INCOME STATEMENT SUMMARY, USD M (US GAAP, YEARS TO 31 DECEMBER)

USD m	FY2021	FY2022	FY2023	FY2024	FY2025
Revenue	12,980	17,074	20,882	23,673	28,480
Gross profit	1,953	2,529	2,937	3,511	4,275
Operating income	632	838	1,093	1,303	1,587
Depreciation and amortisation	421	645	614	742	910
EBITDA (derived)	1,053	1,483	1,707	2,045	2,497
Net income	486	491	745	905	1,028
EPS, USD	3.34	3.32	5.00	6.03	6.80
Stock-based compensation	88	106	127	151	182

Source: StockAnalysis annual income statement and cash flow statement for PWR. EBITDA is operating income plus depreciation and amortisation and does not add back stock-based compensation. R&D and itemised SG&A and interest expense are Not Retrieved.

Quanta revenue and growth, FY2021 to FY2025

Source: StockAnalysis annual income statement. Units: USD bn; growth in percent year on year.

Revenue rose USD 15.5bn (up 119 percent) in four years. The split between volume, price, mix, acquisition and currency is Not Retrieved; acquisition spending of USD 8.1bn over the period, with USD 3.1bn in FY2025 alone, shows that a meaningful share of growth is acquired. Goodwill and intangibles rose from USD 5.3bn to USD 10.2bn. Foreign revenue fell from 14.2 percent of the total in 2023 to 7.0 percent in 2025, so the growth was driven by the United States.

Gross margin has been stable at 14.1 to 15.0 percent, confirming that Quanta does not command pricing power in the way of a product company. Operating margin expanded from 4.9 to 5.6 percent because SG&A and other operating costs grew slower than revenue, a sign of modest operating leverage, offset partly by higher amortisation of acquired intangibles. Net margin is flat at around 3.6 percent because interest expense, tax and the increase in minority interests absorbed the operating improvement. FY2022 net income barely grew (USD 491m versus USD 486m) although operating income rose 33 percent; the provider data do not explain the difference and it is not attributed here.

Latest period: Q2 2026 revenue was USD 9,557m, GAAP diluted EPS USD 2.96 and adjusted diluted EPS USD 4.24; for the six months, revenue was USD 17,432m, net income USD 672m and GAAP diluted EPS USD 4.41 versus adjusted USD 6.92. Adjusted EBITDA was USD 1,067m in the quarter and USD 1,753m in the half. Adjusted figures exclude items reconciled in the release; the gap between GAAP and adjusted EPS (about 36 percent of adjusted EPS in H1) is large enough that this report uses GAAP figures for valuation and treats adjusted measures as management claims.

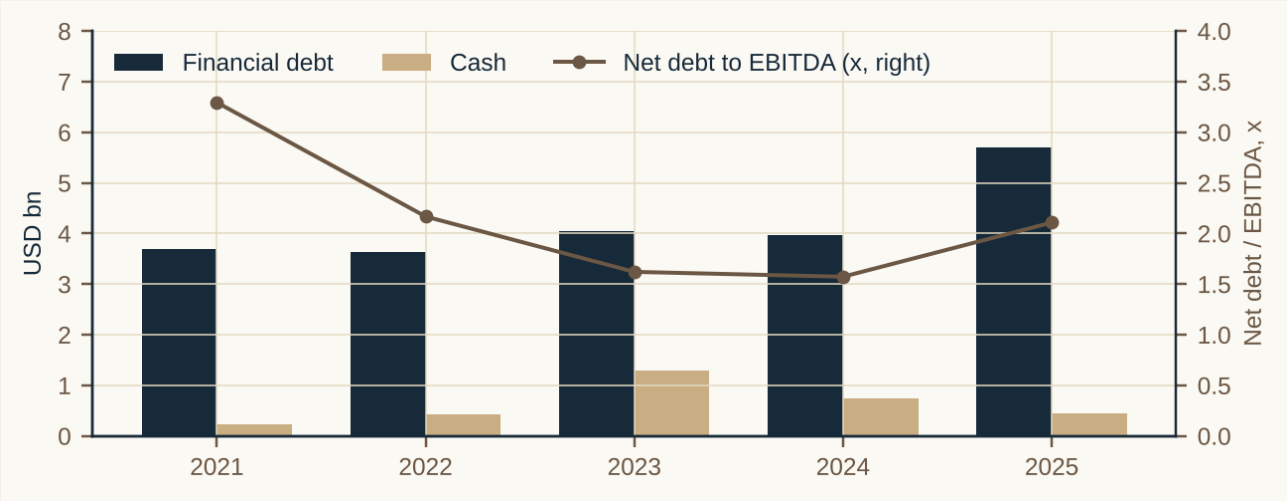

C2. Balance Sheet

BALANCE SHEET SUMMARY, USD M (31 DECEMBER)

USD m	FY2021	FY2022	FY2023	FY2024	FY2025
Cash	229	429	1,290	742	440
Receivables	4,204	4,755	5,824	6,380	8,369
Inventory	85	103	176	260	370
Property, plant and equipment	2,160	2,260	2,586	3,000	3,856
Goodwill	3,529	3,587	4,046	5,316	7,317
Other intangibles	1,801	1,459	1,362	1,861	2,906
Total assets	12,855	13,464	16,237	18,684	24,927
Accounts payable	1,251	1,302	2,028	2,096	2,833
Financial debt (current and long-term)	3,697	3,643	4,056	3,959	5,703
Lease liabilities	305	333	408	520	716
Total liabilities	7,738	8,066	9,954	11,354	15,899
Shareholders' equity (incl. minorities)	5,117	5,399	6,283	7,330	9,028

Source: StockAnalysis annual balance sheet for PWR. Financial debt is short-term debt plus current portion plus long-term debt, calculated.

Financial debt, cash and net leverage, FY2021 to FY2025

Source: StockAnalysis balance sheet; net debt to EBITDA is net financial debt excluding leases divided by derived EBITDA. Units: USD bn and multiple.

At 30 June 2026 cash was USD 506m and total debt USD 6,105m (USD 683m current), so net financial debt was USD 5.6bn. Balance-sheet strength is adequate: the equity ratio is 36 percent, the current ratio 1.14, and leverage is 2.1 times EBITDA excluding leases. Working capital proxy (receivables plus inventory minus payables) rose from USD 4.5bn to USD 5.9bn but fell from 21.0 percent of revenue in FY2021 to 20.7 percent in FY2025. Red flags worth monitoring: goodwill is 81 percent of shareholders' equity (69 percent in FY2021), receivables grew 31 percent in FY2025 against revenue growth of 20 percent, inventory rose 42 percent, and USD 676m of debt falls due within a year. Off-balance-sheet items include USD 14.9bn of performance bonds and operating leases; the 10-K excerpt retrieved does not detail contractual commitments, which are Not Retrieved.

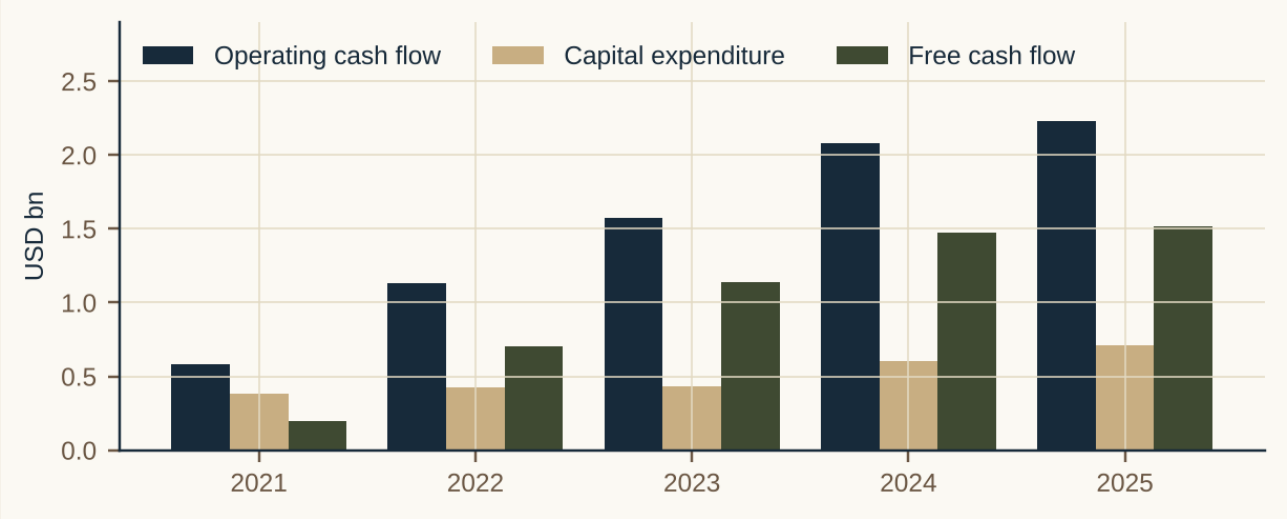

C3. Cash Flow Statement

CASH FLOW SUMMARY, USD M

USD m	FY2021	FY2022	FY2023	FY2024	FY2025
Operating cash flow	582	1,130	1,576	2,081	2,230
Capital expenditure	-386	-428	-435	-604	-713
Free cash flow	197	703	1,141	1,477	1,517
Cash acquisitions	-2,452	-195	-652	-1,746	-3,052
Dividends paid	-34	-41	-48	-54	-60
Share repurchases	-132	-210	-120	-156	-247
Debt issued	6,803	9,300	18,179	21,123	54,523
Debt repaid	-4,265	-9,324	-17,770	-21,215	-52,779

Source: StockAnalysis annual cash flow statement for PWR. Free cash flow equals operating cash flow minus capital expenditure. Debt issued and repaid reflect revolver drawings and repayments and are gross flows.

Operating cash flow, capital expenditure and free cash flow, FY2021 to FY2025

Source: StockAnalysis annual cash flow statement. Units: USD bn.

Free cash flow was 1.5 times net income in FY2025 (1.4 to 1.6 times in the last four years), so accounting earnings are fully supported by cash. The reasons are USD 910m of depreciation and amortisation, much of it from acquisition intangibles that do not require replacement spending, and stock compensation of USD 182m that is non-cash. Free cash flow margin peaked at 6.2 percent in FY2024 and slipped to 5.3 percent in FY2025 as receivables absorbed cash; FCF growth in FY2025 was only 2.7 percent against 20 percent revenue growth. The 2025 free cash flow of USD 1,517m covered dividends and buybacks (USD 307m) but not acquisitions (USD 3,052m), which were financed with USD 1.7bn of net new borrowing. In H1 2026 operating cash flow was USD 1,487m, capital expenditure USD 451m and free cash flow USD 1,070m, and management guides FY2026 free cash flow to USD 2.0bn to 2.5bn, meaning a stronger second half is required.

C4. Forecasting and Projections

Revenue modelling starts from FY2026 guidance of USD 39.3bn to 39.7bn (midpoint USD 39.5bn, up 38.7 percent), of which USD 17.4bn was earned in H1, implying about USD 22.1bn in H2. A material share of this growth is acquisition-assisted, but the split is Not Retrieved. Backlog of USD 53.4bn at 30 June 2026 (USD 32.3bn expected within twelve months) supports the next year. Beyond FY2026 the model decays growth to 4.0 percent by FY2035. Segment mix is assumed stable with Electric at roughly 80 percent of revenue.

Margins: derived EBITDA margin (after stock compensation) was 8.8 percent in FY2025 and the base case assumes 9.8 percent in FY2026, rising to 10.5 percent from FY2031, in line with management's adjusted EBITDA margin of about 10.5 percent at the guidance midpoint (adjusted EBITDA USD 4.15bn on USD 39.5bn of revenue), less stock compensation of about 0.6 percent. Depreciation and amortisation is 3.2 percent of revenue and capital expenditure 2.5 percent of revenue (FY2021 to FY2025 average 2.5 percent); maintenance capex is not disclosed in the sources retrieved. The working-capital investment rate is 5 percent of incremental revenue, set to reproduce guided FY2026 free cash flow.

SCENARIO ASSUMPTIONS AND OUTPUTS

Assumption	Bear	Base	Bull
FY2026 revenue, USD bn	39.5	39.5	39.5
Revenue growth FY2027	7.0%	14.0%	20.0%
Revenue growth FY2035	3.0%	4.0%	5.0%
FY2035 revenue, USD bn	55.4	76.2	96.7
EBITDA margin FY2031 onward	9.0%	10.5%	11.4%
FY2035 free cash flow, USD bn	2.7	4.6	6.5
Enterprise value, USD bn	39.0	62.0	84.4
Value per share, USD	222	375	524

Source: analyst model using Quanta Services guidance (30 July 2026) and FY2021 to FY2025 reported data. Valuation date 26 October 2026, WACC 8.5 percent, terminal growth 3.0 percent.

Sensitivity to operating assumptions is shown below.

SENSITIVITY: REVENUE GROWTH SHIFT (ROWS, PER YEAR) AGAINST EBITDA MARGIN SHIFT (COLUMNS), VALUE PER SHARE IN USD

Growth shift	-1.0 pt	-0.5 pt	Base	+0.5 pt	+1.0 pt
-2 pts per year	281	304	327	349	372
-1 pt per year	301	326	350	375	399
Base	323	349	375	402	428
+1 pt per year	346	374	402	431	459
+2 pts per year	370	401	431	461	491

Source: analyst model, WACC 8.5 percent, terminal growth 3.0 percent. Margin shifts apply to every forecast year.

Even with revenue growth 2 points a year above base and margins 1 point higher, the value of USD 491 remains below the closing price, which indicates that valuation depends on both variables moving favourably and the discount rate staying low.

C5. Discounted Cash Flow (DCF) Model

The DCF discounts unlevered free cash flow (EBIT after tax plus depreciation and amortisation, minus capital expenditure and working-capital investment) from FY2026 to FY2035, with a terminal value after FY2035. The valuation date is 26 October 2026 and FY2026 free cash flow is weighted for the remaining 17 percent of the year. The stub period and mid-year timing are simplified and the cash flows exclude future acquisitions, which would add both revenue and capital outlay. Assumptions: tax 24 percent (analyst assumption, effective rate Not Retrieved), D&A 3.2 percent of revenue, capex 2.5 percent, working-capital

investment 5 percent of incremental revenue, WACC 8.5 percent (assumed risk-free rate and equity premium applied to the 1.27 beta, with moderate leverage), and terminal growth 3.0 percent. Net debt of USD 5,598m is financial debt of USD 6,105m minus cash of USD 506m at 30 June 2026, excluding leases; shares outstanding are 150.34m.

In the base case, the present value of explicit cash flows is USD 21.2bn and terminal value USD 86.4bn (USD 40.8bn present value, 66 percent of enterprise value), giving enterprise value of USD 62.0bn, equity value of USD 56.4bn and USD 375 per share. The terminal value equals 10.8 times FY2035 EBITDA, well below the current trading multiple of 29.0 times, which tells us that current multiples cannot persist without very high growth. The reasonable valuation range from the scenario analysis and sensitivities is USD 280 to USD 525 per share, rather than a point estimate.

SENSITIVITY: WACC (ROWS) AGAINST TERMINAL GROWTH (COLUMNS), VALUE PER SHARE IN USD, BASE CASE

WACC	2.0%	2.5%	3.0%	3.5%	4.0%
7.5%	404	434	472	519	580
8.0%	364	389	419	455	501
8.5%	331	352	375	404	439
9.0%	303	320	339	362	390
9.5%	279	293	309	327	350

Source: analyst model. Net debt USD 5,598m; 150.34m shares; assumptions as described above.

C6. Leveraged Buyout (LBO) Model

Not applicable. With an equity value of USD 82bn and enterprise value of USD 88bn, a leveraged buyout is not a realistic valuation framework for Quanta, and its cyclical, project-based cash flows would not support the debt of 5 to 7 times EBITDA that a buyout would require.

D. Investment Thesis

Bull Case

Revenue growth stays near 20 percent in FY2027 and above 10 percent through FY2031 as utility capital programmes and data center construction expand, backlog converts without margin slippage, Electric segment margins stay above 11 percent, and the consolidated EBITDA margin after stock compensation reaches 11.4 percent. Acquisitions are accretive and the multiple stays above 20 times EBITDA. The model value is USD 524 per share, which is about the current price, so the bull case offers limited upside from here on these assumptions.

Bear Case

Growth slows to 7 percent in FY2027 and 3 percent later as data center and utility programmes pause, competition for projects intensifies and margins fall back toward 9 percent. Fixed-price losses, a working-capital build and acquisition write-downs would add pressure. The valuation multiple would fall toward peer levels (16 to 20 times forward earnings), and the DCF value is USD 222 per share, 59 percent below the close.

Base Case

Revenue reaches USD 39.5bn in FY2026 per guidance, then growth decelerates from 14 percent to 4 percent by FY2035, the EBITDA margin settles at 10.5 percent, and free cash flow reaches USD 4.6bn by FY2035. The model value is USD 375 per share (range USD 280 to USD 525), meaning the current price discounts more than the base case.

Catalysts

POTENTIAL CATALYSTS

Event	Timing	Why it matters
Third quarter 2026 results	29 October 2026	Tests backlog conversion, H2 revenue ramp (about USD 22.1bn required) and the margin trajectory
Year-end backlog and FY2027 outlook	Early 2027	Sets expectations for growth after the FY2026 acquisition-assisted step-up
Utility capital plans	Quarterly utility reporting	Larger capital plans raise Quanta's addressable work; cuts reduce it
Data center spending announcements	Ongoing	Technology capital budgets drive the fastest-growing end market
Acquisitions and buybacks	Ongoing	Accretive deals support growth; leverage and dilution are watch points

Things to Monitor

MONITORING LIST

Metric or event	Why it matters	Positive	Negative
Backlog	Visibility of revenue	Above USD 53.4bn and growing	Decline or slower 12-month conversion
Electric segment margin	Main profit engine	Above 11 percent	Below 10 percent
Receivable days	Cash conversion	Below 100 days	Above 110 days
Free cash flow versus guidance	Earnings quality	Within USD 2.0bn to 2.5bn	Below USD 2.0bn
Net debt / EBITDA	Balance-sheet capacity	Below 2.0x	Above 3.0x
Unapproved change orders	Fixed-price risk	Below USD 983.6m	Rising faster than revenue
Share count	Dilution	Falling	Rising above 150m with buybacks

E. Final Investment Framework

BUSINESS QUALITY	Good. A leading contractor with recurring utility relationships, but project-based, labour-dependent and low-margin (operating margin 5.6 percent).
FINANCIAL QUALITY	Good. Free cash flow of USD 1.5bn exceeded net income by 48 percent in FY2025; ROIC of 9.1 percent is moderate; goodwill is 81 percent of equity.
COMPETITIVE POSITION	Strong in scale, with a moderate moat. Largest listed peer by revenue but net margin (4.0 percent) is half that of EMCOR.
MANAGEMENT	Competent on growth and execution as shown by backlog and cash flow, but capital allocation is acquisition-heavy and the share count has risen 4.9 percent in four years. Insider ownership was not retrieved.
INDUSTRY	Favourable. Utility capital expenditure near USD 1.3 trillion over 2026 to 2030 and data center demand provide a multi-year tailwind, with cyclical exposure to capital budgets.
VALUATION	Demanding. 62.6x trailing earnings and 29.0x EV/EBITDA, above peers and above the DCF base case (USD 375) and bull case (USD 524).
TECHNICAL AND MARKET STRUCTURE	Short-term downtrend within a long-term uptrend: 30.7 percent below the 52-week high, below the 50-day average, RSI 23.7. High beta (1.29) and 34.8 percent volatility.
PRINCIPAL RISK	Multiple compression combined with a slowdown in utility and data center capital programmes.
PRINCIPAL CATALYST	Third quarter 2026 results on 29 October 2026 and backlog development.
KEY VARIABLE	Sustained growth in backlog conversion at stable or higher margins (Electric segment operating margin near 11 percent).
THESIS INVALIDATION	The investment thesis would become materially weaker if backlog declines below USD 50bn, Electric segment operating margin falls below 10 percent for two consecutive quarters, FY2026 free cash flow falls below USD 2.0bn, or net debt to EBITDA exceeds 3.0 times.

F. Data Table

Category	Metric	Current	Prior year	3Y / 5Y trend
Market	Market capitalisation	USD 82.2bn	USD 62.9bn (FY2025 end)	5Y: USD 16.3bn (FY2021)
Market	Enterprise value	USD 88.2bn	USD 68.4bn	5Y: USD 17.8bn
Market	Share price	USD 546.43	USD 422.06 (31 Dec 2025)	5Y: +350.6%
Growth	Revenue growth	20.3% (FY2025)	13.4% (FY2024)	4Y CAGR: 21.7%
Profitability	Gross margin	15.0%	14.8%	15.0% to 15.0%
Profitability	Operating margin	5.6%	5.5%	3Y: 5.2% to 5.6%
Profitability	Net margin	3.6%	3.8%	3Y: 3.6% to 3.6%
Profitability	ROE	12.7%	13.6%	5Y: 10.4% to 12.7%
Profitability	ROIC	9.1%	9.7%	5Y: 6.9% to 9.1%
Cash flow	Operating cash flow	USD 2,230m	USD 2,081m	4Y CAGR: 39.9%
Cash flow	Free cash flow	USD 1,517m	USD 1,477m	4Y CAGR: 66.7%
Leverage	Net debt / EBITDA (incl. leases)	2.4x	1.8x	5Y: 3.6x to 2.4x
Valuation	P/E (trailing)	62.6x	51.6x (FY2024)	5Y: 33.6x to 62.6x
Valuation	EV/EBITDA	29.0x	24.9x (FY2024)	5Y: 17.0x to 29.0x
Valuation	P/FCF	35.9x	31.6x (FY2024)	5Y: 83.1x to 35.9x
Market	Beta	1.27 (provider)	N/A	Calculated 1.29

Category	Metric	Current	Prior year	3Y / 5Y trend
Market	Volatility (annualised)	34.8%	N/A	5Y monthly basis
Market	Maximum drawdown	-26.2% (month-end)	N/A	5Y monthly basis

G. Sources and Methodology

Data cross-check

Financial statements were taken from the StockAnalysis presentation of Quanta's reports and cross-checked against the company's own second quarter 2026 earnings release and FY2025 Form 10-K for segments, customer concentration and employee data. Reported-versus-derived distinctions: EBITDA is derived (operating income plus depreciation and amortisation); net debt and leverage ratios are calculated; ROE, ROA, ROIC and valuation ratios are provider figures. The provider enterprise value (USD 88.2bn) differs from a simple build (market cap USD 82.2bn plus June 2026 debt USD 6.1bn minus cash USD 0.5bn equals USD 87.8bn) by about USD 0.4bn, consistent with the inclusion of lease liabilities and minorities. Trailing EPS (USD 8.74) and trailing net income (USD 1.33bn) are consistent with FY2025 EPS of USD 6.80 plus H1 2026 growth. Price data from Alpha Vantage (monthly) and StockAnalysis (daily) agree on month-end closes (for example, 30 September 2026 at USD 642.51). Fiscal year ends on 31 December; all amounts are US dollars under US GAAP. Peer data cover different reporting periods (trailing twelve months to latest quarter) and are not adjusted. Items not found in primary sources are shown as Not Retrieved or N/A.
