Executive Summary

American Tower Corporation owns and operates roughly 149,000 communications towers and a network of data centres, leasing space on this fixed infrastructure to wireless carriers, broadcasters and enterprise and cloud customers under long-duration contracts. The business is best understood as a landlord to the wireless and digital economy: it does not sell airtime or bandwidth itself, but rents the physical real estate, vertical space and power that carriers and data-centre tenants need to operate.

Business

American Tower leases vertical space on towers and, since the 2021 CoreSite acquisition, data-centre capacity, to wireless carriers, cable operators, government agencies and cloud and enterprise customers. Its primary revenue engine is long-term, multi-tenant tower leasing in the United States and Canada, supplemented by international tower portfolios in Latin America, Africa and Europe and by a domestic data-centre segment. Its core customers are a small number of large wireless carriers and, increasingly, hyperscale and enterprise data-centre tenants, with the business model built on fixed-cost infrastructure monetised through incremental tenant additions.

Financial Condition

Total revenue reached \$10,645.1 million in fiscal 2025, up 5.1% year over year, with calculated EBITDA of \$6,122.8 million (57.5% margin) and net income attributable to common stockholders of \$2,529.8 million. Operating cash flow was \$5,464.0 million against capital expenditure of \$1,680.4 million, producing free cash flow of \$3,783.6 million; the company's own adjusted funds from operations (AFFO), the REIT industry's preferred distributable-cash metric, was \$5,042 million, or \$10.76 per share. Net debt stood at approximately \$43.5 billion at fiscal year-end 2025, equivalent to roughly 7.1 times calculated EBITDA.

Market Position

American Tower's principal publicly traded competitors are Crown Castle Inc. and SBA Communications Corporation, alongside carrier-owned towers and, internationally, IHS Holding and Cellnex Telecom. Its major competitive advantage is the difficulty and cost of relocating an antenna once installed, which anchors tenants to a site for years and lets American Tower add co-locating tenants at high incremental margin. Its major competitive weakness is customer concentration: a small number of large wireless carriers account for the substantial majority of tower revenue, giving those tenants disproportionate negotiating leverage at lease renewal.

Valuation

At the \$170.78 closing price on 23 September 2026, American Tower's market capitalisation was approximately \$81.7 billion and calculated enterprise value approximately \$124.9 billion. The stock traded at approximately 15.9 times trailing AFFO per share, 17.7 times calculated trailing EBITDA (16.8 times on the data provider's own trailing calculation), and a dividend yield of approximately 4.1%.

Investment Framework

WHAT IS ATTRACTIVE	A structurally advantaged, high-margin leasing model with multi-year revenue visibility, contractual rent escalators, and a growing data-centre vector tied to artificial-intelligence and hybrid-cloud demand.
WHAT IS CONCERNING	Elevated leverage relative to a de minimis equity base, a guided flat-to-slightly-negative adjusted EBITDA year in 2026, and sensitivity to the level of long-term interest rates that determines both the cost of refinancing and the multiple investors will pay for the distributable cash flow.
WHAT MUST GO RIGHT	Continued mid-single-digit organic tenant billings growth in the core U.S. tower portfolio and a successful scale-up of the CoreSite data-centre platform to offset a maturing domestic tower-leasing growth rate.
WHAT COULD BREAK THE THESIS	Accelerated carrier network-sharing or consolidation that reduces the number of paying tenants per tower, a sustained rise in long-term borrowing costs, or renewed emerging-market currency and political disruption in the remaining international portfolio.
WHAT APPEARS PRICED IN	A market multiple above domestic peer Crown Castle on an EV/EBITDA basis but below SBA Communications suggests the market is pricing continued execution on data centres and a return to high-single-digit AFFO growth once the 2026 guided trough passes, without yet crediting a resumption of the growth rates achieved earlier in the decade.

Investment Profile

Dimension	Assessment
Business quality	High - contracted, multi-tenant infrastructure leasing with structurally high incremental margins.
Financial quality	Moderate - strong and growing distributable cash flow, offset by heavy leverage and a near-zero GAAP equity base.
Competitive position	Strong - one of three scaled independent tower owners in the United States, with high switching costs for tenants.
Growth profile	Moderate, decelerating in 2026 - mid-single-digit organic growth in towers, offset by a guided flat adjusted EBITDA year, with data centres as the newer growth vector.
Balance-sheet risk	Elevated - net debt of approximately 7 times calculated EBITDA, predominantly fixed-rate but requiring continuous refinancing.
Valuation	Moderate - trading in line with the average of its two closest listed peers on EV/EBITDA, near the lower half of its 52-week price range.
Market and technical profile	Range-bound - the shares trade below both the 50-day and 200-day moving averages and roughly 12% below the 52-week high.

Assessments reflect OCAD analysis of the financial and market data presented in this report; they are not ratings and do not constitute a recommendation to buy, sell, or hold the security.

A. About the Business

A1. Business Environment

American Tower operates in the communications-infrastructure leasing industry, a capital-intensive, asset-heavy business in which independent tower companies own the physical real estate, steel structures, and increasingly the data-centre buildings, that wireless carriers and digital-infrastructure customers need but generally prefer not to own outright. The industry's value chain runs from land or rooftop rights, through tower or building construction and permitting, to the leasing of vertical space or rack capacity to one or more tenants on the same structure. Independent operators such as American Tower, Crown Castle and SBA Communications control a large share of towers in the United States, while carriers such as AT&T, Verizon and T-Mobile US retain some towers themselves and lease space on others.

The industry's principal revenue pool is recurring lease rental income, typically under contracts of five to ten years with multiple renewal options, fixed-percentage or consumer-price-index-linked annual rent escalators, and high renewal rates given the cost and regulatory friction of relocating an antenna. The principal cost pool is ground rent and property taxes paid to landowners, together with maintenance capital expenditure on structures and, for towers with backup power needs, fuel and generator maintenance. Capital intensity is high at the point of new construction or acquisition, but incremental economics are favourable once a tower is built and occupied by an initial anchor tenant, because a second or third co-locating tenant adds high-margin revenue against a largely fixed cost base.

The industry is moderately cyclical with respect to carrier capital-spending cycles (peaking around each successive generation of wireless technology deployment) but structurally defensive with respect to the broader economy, since carriers must maintain network coverage and quality regardless of the macroeconomic backdrop. It is lightly regulated at the federal level in the United States but subject to substantial local zoning, environmental and permitting requirements that raise barriers to new tower construction, and it is capital-market dependent given the leverage most tower companies, structured as REITs, carry to fund growth and shareholder distributions.

As of the report date, the industry sits in a **mature, moderately consolidating** stage in the United States and Europe, where carrier count has fallen through consolidation, and in an **emerging-to-growing** stage in parts of Latin America and Africa, where mobile penetration and 4G/5G build-out remain earlier in their cycle. This is because tower-count growth in developed markets is now driven primarily by densification and technology overlays (small cells, additional spectrum bands, 5G equipment) rather than by new site construction, whereas developing markets still add new macro sites to extend coverage.

A2. What Does the Company Do?

American Tower owns and operates 149,686 communications sites worldwide as of 31 December 2025, comprising 42,224 in the United States and Canada, 47,081 in Latin America, 27,857 in Africa and the Asia-Pacific region, and 32,524 in Europe, alongside a portfolio of carrier-neutral data centres operated through its CoreSite subsidiary, acquired in December 2021 for approximately \$10.4 billion. Its core product is vertical real estate: space on a tower, rooftop or distributed-antenna system to which a wireless carrier, broadcaster, government agency, or other licensed operator attaches antennas and related equipment under a long-term lease. Its customers in the tower business are almost exclusively wireless carriers (principally the major mobile network operators in each market) and, to a lesser degree, government and public-safety agencies and other communications licensees. In the data-centre segment, customers are enterprises, cloud-service providers, and network operators requiring interconnection and colocation capacity, increasingly for artificial-intelligence and hybrid-cloud workloads.

Figure A2.2: FY2025 property revenue by segment

Source: American Tower FY2025 earnings release. U.S. & Canada remains the largest single segment; Data Centers (CoreSite) is now approximately 10% of property revenue.

Pricing follows a lease structure rather than a usage-based model: a tenant signs a lease for defined equipment space at a fixed or escalating monthly or annual rent, with contractual escalators (approximately 3% per year is typical for U.S. leases, with consumer-price-index-linked or fixed-percentage escalators common internationally) and multi-year renewal options. The overwhelming majority of tower revenue is recurring and contracted rather than transactional, giving the business unusually high revenue visibility for a real-asset company. Major operating costs are ground lease rent, property taxes, utilities, and repairs and maintenance; because these costs do not scale proportionally with the number of tenants on a given structure, each incremental co-location carries very high margin. Capital requirements are concentrated in new tower or data-centre construction, tower and network augmentation to support additional equipment loads, and, periodically, portfolio acquisitions.

Figure A2.1: How a dollar flows through American Tower

CUSTOMER	PRODUCT / SERVICE	REVENUE	COSTS	OPERATING PROFIT	CASH FLOW & CAPITAL ALLOCATION
Wireless carriers (towers) and enterprise / cloud tenants (data centres) sign multi-year leases for space, power and interconnection.	Vertical space on towers, rooftops and distributed-antenna systems; rack space, power and interconnection in carrier-neutral data centres.	Contracted rent with fixed or CPI-linked annual escalators; co-location by a second or third tenant adds revenue on the same structure.	Ground rent, property tax, utilities and maintenance capex - largely fixed regardless of tenant count on a given site.	High incremental margin on co-location; FY2025 calculated operating margin of 45.8% and EBITDA margin of 57.5%.	FY2025 free cash flow of \$3.78 billion funds a growing common dividend (\$6.80 per share), debt service, and reinvestment in towers and data centres.

Source: OCAD analysis of American Tower's disclosed business model and FY2025 reported financial results.

Framed as **Customer to Product and Service to Revenue to Costs to Operating Profit to Cash Flow to Capital Allocation**, the most economically important links in the chain are the initial signing of an anchor tenant (which determines whether a site is built at all) and subsequent co-location (which determines the return on that fixed asset). A tower with three tenants is dramatically more profitable than a tower with one, since the incremental tenant contributes revenue at minimal incremental cost; this dynamic is the single most important driver of American Tower's profitability.

A3. Business and Relationship Network

American Tower's most important relationships are with its tenants, the wireless carriers whose networks depend on its sites, and with the landowners and municipalities that control the ground leases and permits underlying those sites. In the United States, its key tenants are the major national wireless carriers; internationally, tenant concentration is similarly weighted toward the leading mobile operator in each market. Since December 2021, CoreSite has added a distinct network of enterprise, cloud and network-operator relationships built around interconnection ecosystems in major U.S. metropolitan data-centre markets. Following the September 2024 sale of its India operations to Brookfield Asset Management's Data Infrastructure Trust for approximately \$2.5 billion, American Tower's international network is now concentrated in Latin America, Africa, and Europe.

Figure A3.1: Simplified relationship network

UPSTREAM

- Landowners and municipalities providing ground leases, zoning and permitting rights
- Tower and structural-steel construction contractors
- Power and generator-fuel suppliers for site backup power

AMERICAN TOWER CORPORATION

- U.S. & Canada towers · Latin America towers · Africa & APAC towers · Europe towers · CoreSite data centres

DOWNSTREAM

- Major wireless carriers (largest tenant category by revenue)
- Broadcasters and government / public-safety licensees
- Enterprise, cloud and network-operator tenants at CoreSite facilities

OWNERSHIP AND COUNTERPARTIES

- Widely held public float (approximately 96.8% institutional ownership; approximately 7.6% insider-held)
- Brookfield Asset Management (counterparty to the 2024 India divestiture)

Each relationship matters economically because the tower-leasing model depends on control of scarce, permitted vertical real estate (making landowner and municipal relationships a gating factor for growth), and on multi-year tenant commitments (making carrier relationships the primary determinant of revenue durability). The CoreSite interconnection ecosystem matters because it is the company's main avenue into data-centre and digital-infrastructure demand that is not directly tied to traditional tower leasing.

A4. Competition

American Tower's most relevant direct competitors are Crown Castle Inc. and SBA Communications Corporation, the two other scaled, publicly traded independent tower operators with significant U.S. portfolios. Indirect competition comes from carrier-owned towers that are not offered for third-party co-location, and from in-building and small-cell systems that can, in some cases, substitute for macro-tower coverage in dense urban areas. Internationally, competitors include IHS Holding in Africa and the Middle East and Cellnex Telecom in Europe. An emerging category of competition, still nascent, comes from satellite-based direct-to-device connectivity services, which could eventually reduce the need for terrestrial tower coverage in the lowest-density areas, though this is not yet a material factor in tower demand.

TABLE A4.1: SELECTED COMPETITOR COMPARISON

Company	What it sells	Geographic exposure	Scale (market cap)	Relative position vs. American Tower
American Tower	Tower leasing; data centres (CoreSite)	U.S. & Canada, Latin America, Africa & APAC, Europe	\$81.7bn	Largest by market capitalisation and site count; only major peer with a data-centre platform
Crown Castle	Tower leasing (U.S.-only after 2025 fiber-solutions divestiture)	United States only	\$30.6bn	Pure-play U.S. towers; recently cut its dividend as part of a balance-sheet reset
SBA Communications	Tower leasing	United States, Central & South America, select international markets	\$18.7bn	Smaller, more U.S.- and Latin America-weighted portfolio; historically efficient operator

Sourced: market capitalisation as of 22-23 September 2026, data provider statistics for Crown Castle and SBA Communications; American Tower market capitalisation per Alpha Vantage as of 23 September 2026.

These three companies were selected because they compete directly for the same wireless-carrier tenants, the same acquisition targets, and the same pool of REIT-focused equity and debt capital, not merely because they share a real-estate classification. Carrier-owned towers and smaller regional tower owners are relevant to overall market structure but are not included in the comparison because they are not comparable, listed, scaled competitors.

A5. Competitive Differences

American Tower's principal structural advantages are high switching costs, scale, and access to capital. Once a carrier's antenna is installed and integrated into its radio-frequency network plan, relocating it to a competing structure is costly, operationally disruptive, and subject to re-permitting risk, which anchors tenants to existing sites for extended periods and supports high lease-renewal rates. Scale advantages include a lower cost of capital than smaller or private tower owners, and a large enough portfolio to negotiate master lease agreements with national carriers. The company's data-centre platform, still a minority of revenue but growing, is a differentiated advantage relative to SBA Communications, which has no comparable digital-infrastructure business.

Structural disadvantages include high financial leverage, common to the REIT model, which increases sensitivity to interest-rate cycles, and geographic exposure to emerging markets in Latin America and Africa where currency depreciation has historically reduced the U.S. dollar value of local-currency lease revenue. Customer concentration is a further structural weakness: a small number of large carriers account for the majority of tower revenue in most markets, and consolidation among carriers (fewer, larger tenants) can reduce the number of paying tenants per tower over time.

The company's moat is best described as **structural but not absolute**, resting on the physical and regulatory difficulty of replicating a permitted tower site rather than on intellectual property, brand, or network effects in the conventional sense. This is a **structural** rather than **temporary** advantage, since it derives from durable physical and regulatory characteristics of tower real estate rather than from a temporary cost or technology lead.

MOAT ASSESSMENT

Strong

This reflects high switching costs, oligopolistic market structure among independent U.S. tower owners, and durable multi-year contracts, offset against customer concentration risk and the absence of pricing power beyond contractual escalators.

A6. Industry Trend

Historical industry growth has been driven by successive generations of wireless technology (3G, 4G LTE, and most recently 5G), each of which required carriers to add equipment to existing towers or build new sites, supplemented by tower-company acquisitions of carrier-owned portfolios. Growth in the United States has moderated as 5G mid-band deployment matures; management itself has guided to a 2026 "growth trough" in adjusted EBITDA before an anticipated re-acceleration tied to continued 5G densification, artificial-intelligence-driven data-centre and hybrid-cloud demand, and eventual 6G-related investment cycles later in the decade. Demand drivers include rising mobile data consumption, the buildout of fixed-wireless-access networks, and, for the data-centre segment, enterprise and hyperscale demand for interconnection capacity near dense population centres.

Pricing trends are governed primarily by contractual escalators rather than open-market pricing, giving the industry more predictable revenue trends than most real-estate categories, though renewal negotiations can be contentious when a large carrier is the counterparty. Consolidation among wireless carriers (fewer, larger tenants) is a structural risk to tenant-per-tower economics, while regulatory and permitting trends generally continue to favour existing tower owners over new entrants, given the difficulty of siting new towers in developed markets.

The industry is best classified as **mature** in its core U.S. tower-leasing business, **growing** in its data-centre and digital-infrastructure adjacency, and **moderately cyclical** around the timing of carrier capital-spending cycles. The most likely conditions that would reverse the current moderating growth trend are a new wireless-technology deployment cycle (widely anticipated around 6G later in the decade) or an acceleration in AI-related data-centre demand that lifts CoreSite's growth contribution materially above current guidance.

A7. Management

TABLE A7.1: KEY EXECUTIVES

Name	Position	Background
Steven O. Vondran	President and Chief Executive Officer	With American Tower since 2000; held senior leasing, legal, and operating roles including Global Chief Operating Officer before being named CEO; J.D., University of Arkansas at Little Rock; B.A., Hendrix College.

Name	Position	Background
Rodney M. Smith	Executive Vice President, Chief Financial Officer and Treasurer	Named CFO in March 2020; oversees financial strategy, capital allocation and treasury functions.

Sourced: American Tower Corporation leadership biographies (americantower.com) and company press releases.

Mr. Vondran's twenty-five-year tenure inside American Tower, rising through U.S. leasing operations, legal, and global operations before the chief executive role, suggests deep operational familiarity with the core leasing business rather than an outsider's strategic pivot; his tenure as CEO began amid the strategic decision to exit the India market and refocus international capital toward higher-return markets and the CoreSite data-centre platform. Capital allocation under the current management team has prioritised debt reduction and reinvestment following the CoreSite acquisition and the India divestiture, alongside a common dividend that has grown every year since the company's REIT conversion, from \$5.21 per share in 2021 to \$6.80 per share in 2025. Insider ownership is modest at approximately 7.6% of shares outstanding, which is unremarkable for a company of this size and age; the substantial majority of shares are held by institutional investors (approximately 96.8%).

Evaluated against shareholder interests, management's recent record shows: (i) willingness to exit an underperforming international market (India) at a full-cycle loss on the entry investment rather than continuing to fund a business with structurally weaker returns; (ii) continued dividend growth consistent with the company's REIT distribution requirements; and (iii) a strategic pivot of growth capital toward the data-centre business, whose returns are not yet fully proven at scale relative to the core tower business. This constitutes a reasonable, if not exceptional, record of capital discipline.

B. Evaluation

B1. Financial and Operating Metrics

American Tower's profitability metrics are strong and improving on a calculated basis: gross margin was 73.7% and operating margin 45.8% in fiscal 2025, both roughly consistent with the 2021-2025 average, while calculated EBITDA margin was 57.5%. Net margin of 23.8% is materially lower than EBITDA margin because of substantial depreciation and amortisation (a REIT-typical feature of owning long-lived physical assets) and interest expense on a large, REIT-typical debt load. Growth metrics show revenue compounding at 3.3% annually from fiscal 2021 to fiscal 2025 (on a basis restated for the 2024 India divestiture; see the data-quality note below), a materially slower rate than free cash flow growth of 2.4% annually and calculated EBITDA growth of 0.4% annually over the same period, reflecting the volatility introduced by impairment charges, foreign-currency movements, and the useful-life accounting change discussed in Section C1.

Efficiency metrics are of limited analytical value for a company of this kind: American Tower carries no inventory, and asset turnover (revenue of \$10,645.1 million against total assets of \$63,190.4 million, or 16.8%) mechanically reflects the accounting value of a large, partially depreciated tower and data-centre asset base rather than operating efficiency. These metrics are noted for completeness but are not weighted heavily in this assessment, consistent with the general principle that metrics economically meaningless for a given business should not be mechanically emphasised.

Leverage is the more economically important metric class for this business. Net debt at fiscal year-end 2025 was approximately \$43.5 billion, or 7.1 times calculated EBITDA, at the higher end of the five-year range (5.9x to 8.3x), reflecting both the 2021 CoreSite-related debt issuance and subsequent shareholder distributions against a shrinking equity base. Interest coverage (EBIT divided by interest expense) was 4.0 times in fiscal 2025, adequate but not generous for a Baa3/BBB--rated issuer, and below the 2021 level of 4.3 times.

Cash-flow metrics show free cash flow (operating cash flow less capital expenditure) of \$3,783.6 million in fiscal 2025, a free cash flow margin of 35.5% of revenue, and cash conversion (operating cash flow divided by net income) of 2.16 times. Cash conversion has ranged from 1.9 times to 3.2 times over the past five years, a wide range driven far more by swings in reported net income (from impairments, foreign-currency remeasurement, and the 2024 depreciation useful-life change) than by variability in operating cash generation itself, which has been comparatively stable. This is the clearest evidence in the financial statements that reported net income understates the stability of American Tower's underlying cash generation.

Figure B1.1: Net debt and leverage, FY2021-FY2025

Source: OCAD calculation from SEC-filing-derived balance sheet data (Alpha Vantage).

B2. Risks

TABLE B2.1: STRUCTURED RISK ASSESSMENT

Category	Principal risk	Relative severity
Business	Customer concentration: a small number of large wireless carriers account for the majority of tower revenue in most markets; carrier consolidation could reduce tenants per tower	High
Financial	Net debt of approximately 7 times calculated EBITDA against a near-zero GAAP equity base, with continuous refinancing requirements	High
Competitive	Crown Castle and SBA Communications compete for the same tenants and acquisition targets; satellite direct-to-device technology is an early-stage substitute in low-density coverage	Moderate
Technological	A future shift in radio-access-network architecture that reduces the number of physical antenna locations required (for example, further network sharing or satellite backhaul) would reduce tower demand	Moderate
Regulatory	Zoning, permitting and environmental rules vary by jurisdiction and can delay new-site construction or equipment upgrades; international operations face licensing and repatriation risk	Moderate
Macro	Sustained higher long-term interest rates raise refinancing costs and compress the multiple investors will pay for REIT distributable cash flow; foreign-currency depreciation reduces the dollar value of international lease revenue	High
Valuation	The stock trades at a premium to a conservative discounted-cash-flow estimate (Section C5); a re-rating toward that estimate, or a growth disappointment in data centres, would compress the multiple	Moderate

Ranking by probability multiplied by impact, the three risks most capable of permanently impairing shareholder value are: first, a sustained increase in long-term interest rates that both raises the cost of refinancing roughly \$45 billion of debt and compresses the multiple applied to distributable cash flow; second, an acceleration of carrier network-sharing or consolidation that reduces the number of paying tenants per tower structurally rather than cyclically; and third, a failure of

the CoreSite data-centre platform to scale profitably enough to offset a maturing core tower-leasing growth rate, leaving the company reliant on a slower-growing base business carrying REIT-level leverage.

B3. Valuation

TABLE B3.1: CURRENT VALUATION MULTIPLES

Metric	Value	Basis
Price / AFFO per share	15.9x	Price \$170.78 ÷ FY2025 AFFO per share \$10.76 (Calculated)
Trailing P/E	24.0x	Sourced, data provider, trailing twelve months
Forward P/E	25.2x	Sourced, data provider, consensus forward estimate
EV / EBITDA (calculated)	17.7x	Calculated EV of \$124.9bn ÷ trailing EBITDA \$7,044.4m
EV / EBITDA (data provider)	16.8x	Sourced, data provider's own EV convention
EV / Revenue	11.4x	Calculated; cross-checks closely to the data provider's 11.39x
Price / FCF	21.6x	Market cap \$81.7bn ÷ FY2025 free cash flow \$3,783.6m
Dividend yield	4.1%	Trailing dividend per share \$6.98 ÷ price \$170.78
PEG ratio	1.65	Sourced, data provider

The modest gap between the calculated and data-provider EV/EBITDA figures (17.7x versus 16.8x) reflects differing treatment of finance-lease obligations and the precise net-debt date in the enterprise-value calculation; both are shown for transparency.

Against its own five-year history, American Tower's EV/EBITDA multiple is broadly in line with the middle of its historical range, and its price/AFFO multiple of 15.9x is below the double-digit-percentage AFFO-per-share growth years of 2021-2022, consistent with a market that has re-rated the stock downward as growth has decelerated toward the guided 2026 trough. Against peers, American Tower's 16.8x EV/EBITDA sits between Crown Castle's 19.8x and SBA Communications' 18.4x on the low side, which is a data point analysts should treat cautiously, since Crown Castle's multiple currently reflects a post-dividend-cut, U.S.-only, smaller-scale portfolio, and SBA Communications' multiple reflects a more efficiently run but less internationally diversified business; direct multiple comparison across the three is imperfect given these structural differences.

The current share price requires, at minimum, that American Tower sustain organic tenant billings growth in the low-to-mid single digits, successfully scale CoreSite without a material step-up in the balance sheet's leverage, and refinance maturing debt without a significant increase in average cost of debt. These appear to this analyst to be **reasonable** expectations given the company's demonstrated execution through the India divestiture and CoreSite integration, though the 2026 guided flat-to-negative adjusted EBITDA year (Section C4) suggests the market is not currently underwriting an optimistic near-term growth scenario; the valuation instead appears to reflect confidence in a resumption of growth beyond 2026 rather than in 2026 itself.

Figure B3.1: EV/EBITDA and net debt/EBITDA versus listed tower peers

Source: American Tower figures per Table B3.1 (OCAD calculation); Crown Castle and SBA Communications figures sourced from data-provider statistics as of 22-23 September 2026.

B4. Capital Market and Stock Analysis

TABLE B4.1: PRICE HISTORY AND RETURNS TO 23 SEPTEMBER 2026

Period	Level / range	Change
1 day	\$175.25 to \$170.78	-2.55%
Approx. 1 month (23 Aug - 23 Sep)	\$176.23 to \$170.78	-3.1%
Approx. 3 months (23 Jun - 23 Sep)	\$176.43 to \$170.78	-3.2%
Approx. 5 months (1 May - 23 Sep, longest window in available daily data)	\$181.61 to \$170.78	-6.0%
52-week range	\$160.06 - \$194.23	Current price 6.7% above the 52-week low; 12.1% below the 52-week high

Sourced: Alpha Vantage daily and weekly equity price data and company-reported 52-week range. Return periods beyond five months are not shown because they are not directly supported by the daily price series retrieved for this report; the five-year weekly chart in Figure B4.2 provides longer-term context.

Figure B4.1: Share price, 1 May 2026 to 23 September 2026, with 50-day and 200-day moving averages

Source: OCAD analysis of Alpha Vantage daily equity price data; moving averages as reported by the data provider as of 23 September 2026.

Figure B4.2: Share price and drawdown from trailing peak, five years to 23 September 2026

Source: OCAD analysis of Alpha Vantage weekly equity price data. Drawdown measures the percentage decline from the highest weekly close observed up to that point in the trailing five-year window.

Volatility and momentum: the shares closed on 23 September 2026 below both the 50-day moving average (\$172.94) and the 200-day moving average (\$177.46), indicating a near-term technical downtrend within a broader range-bound pattern over the trailing year. The stock's beta of 0.895 (data-provider sourced) indicates historically modest sensitivity to broad-market moves, consistent with a REIT whose cash flows are contractually insulated from short-term economic cycles, though its five-year chart (Figure B4.2) shows a substantial peak-to-trough drawdown driven primarily by the 2022-2023 period of rising long-term interest rates, which compressed valuation multiples across the REIT sector broadly rather than reflecting an American Tower-specific event. Volume patterns show no unusual concentration around the report date. Given the absence of directly retrieved benchmark index data in this report, relative performance against a broad market index and against sector

peers is not quantified here and should be read as a limitation of the available data rather than a statement that no such relationship exists.

The current technical structure, a price below both major moving averages but well above the 52-week low, suggests a market still digesting the 2026 growth-trough guidance rather than one in acute distress; this is a separate signal from the fundamental valuation conclusion in Section B3 and should not be read as a directional forecast of future price movement.

C. Financial Statements

The following analysis covers fiscal years 2021 through 2025 (year end 31 December), drawing on SEC-filing-derived normalised financial statement data. Figures for 2021-2023 are presented on a basis that reclassifies the India business as discontinued operations following its September 2024 sale; readers comparing these figures against American Tower's originally issued 2021-2023 press releases, which included India in continuing operations, will observe materially different total revenue figures for those years (for example, originally reported fiscal 2022 revenue of \$10,711 million versus \$9,645.4 million shown here on a restated, comparable basis). This report uses the restated, comparable basis throughout for trend analysis, consistent with the instruction to avoid mixing accounting bases without explanation.

C1. Income Statement

Figure C1.1: Revenue and margins, FY2021-FY2025

Source: OCAD calculation from SEC-filing-derived financial statement data (Alpha Vantage), restated basis excluding the divested India business.

TABLE C1.1: INCOME STATEMENT SUMMARY (\$ MILLIONS EXCEPT PER-SHARE)

Fiscal year	2021	2022	2023	2024	2025
Total revenue	9,356.9	9,645.4	10,012.2	10,127.2	10,645.1
Revenue growth	n/a	3.1%	3.8%	1.1%	5.1%
Gross profit	6,674.9	7,076.2	7,450.7	7,552.8	7,843.6
Gross margin	71.3%	73.4%	74.4%	74.6%	73.7%
Operating income	3,132.0	2,738.6	3,125.5	4,516.5	4,880.6
Operating margin	33.5%	28.4%	31.2%	44.6%	45.8%
EBITDA (calculated)	6,032.9	6,577.1	6,004.0	7,154.1	6,122.8
EBITDA margin (calculated)	64.5%	68.2%	60.0%	70.6%	57.5%
Net income attributable to common stockholders	2,567.7	1,765.8	1,483.3	2,255.0	2,529.8

Fiscal year	2021	2022	2023	2024	2025
Net margin	27.4%	18.3%	14.8%	22.3%	23.8%

Sourced and Calculated: revenue, gross profit and operating income are as reported (SEC-filing-derived, restated basis); EBITDA, all margins and revenue growth are calculated by OCAD.

Revenue growth accelerated to 5.1% in fiscal 2025 from 1.1% in fiscal 2024, driven primarily by continued mid-single-digit organic tenant billings growth (5.1% organic tenant billings growth for FY2025, company-reported) across the tower portfolio and continued ramp of the CoreSite data-centre business, rather than by acquisitions, which have been minimal since the 2021 CoreSite transaction. Operating margin has expanded markedly since 2023, from 31.2% to 45.8%, substantially reflecting a 2024 accounting change that extended the estimated useful lives of tower assets, reducing depreciation expense by approximately \$730 million in that year (company-disclosed), rather than an improvement in underlying unit economics; readers should treat the pre- and post-2024 operating margins as not directly comparable for this reason. EBITDA margin, by contrast, fell in 2025 versus 2024 (57.5% from 70.6% on this calculated, EBIT-plus-D&A basis) because the 2024 useful-life change flows through D&A rather than EBIT, distorting year-over-year EBITDA comparability; the calculated EBITDA figures in this table should therefore be read alongside the company's own non-GAAP adjusted EBITDA (Section C4), which normalises for such items and showed steadier, low-single-digit growth of 4.7% in fiscal 2025.

Net margin, at 23.8% in fiscal 2025, remains below EBITDA margin principally due to interest expense of \$1,017.9 million (an effective average cost of debt of approximately 2.3% on average debt outstanding, reflecting a largely fixed-rate, investment-grade-adjacent debt structure issued across prior years) and income tax expense of \$415.7 million (an effective tax rate of 14.1%, low relative to the U.S. statutory rate because of American Tower's REIT status, which permits a dividends-paid deduction against taxable income for its qualifying REIT business). Growth over the period has come predominantly from organic tenant billings growth (volume of co-located equipment and contractual price escalators) and from the ramp of the CoreSite data-centre platform, rather than from new market expansion or further acquisitions, consistent with a company in harvest-and-optimize mode following the large 2021 CoreSite and earlier international acquisitions.

C2. Balance Sheet

TABLE C2.1: BALANCE SHEET SUMMARY (\$ MILLIONS)

Fiscal year	2021	2022	2023	2024	2025
Cash and equivalents	1,949.9	2,028.4	1,753.7	1,999.6	1,474.8
Property, plant and equipment (net)	29,009.1	28,917.2	28,667.6	27,146.4	28,782.8
Goodwill	13,350.1	12,956.7	12,639.0	11,768.1	12,255.5
Other intangible assets	20,727.2	17,983.3	16,520.7	14,474.3	14,530.7
Total assets	69,887.9	67,194.5	66,027.6	61,077.4	63,190.4
Total debt	52,008.6	47,051.0	46,307.0	43,954.1	44,963.9
Total liabilities	60,818.3	54,786.0	55,162.2	51,428.7	52,835.1
Total shareholders' equity	5,081.2	5,572.4	4,198.2	3,382.2	3,652.5
Net debt	50,058.7	45,022.6	44,553.3	41,954.5	43,489.1
Net debt / calculated EBITDA	8.30x	6.85x	7.42x	5.86x	7.10x

Sourced and Calculated: balance sheet line items are as reported (SEC-filing-derived); net debt and leverage ratios are calculated by OCAD.

American Tower's balance sheet exhibits a structural feature common to mature, REIT-converted infrastructure owners: a very small, and at times negative-trending, equity base (retained earnings of negative \$5,086.0 million at fiscal year-end 2025) resulting from cumulative shareholder distributions and historical impairment charges exceeding cumulative accounting net income since the company's 2012 REIT conversion, rather than from operational distress. Return-on-equity and price-to-book metrics are consequently not economically meaningful for this company and are de-emphasised in this report in favour of return on invested capital and enterprise-value-based metrics, consistent with the instruction not to calculate metrics that are economically meaningless for the business in question.

Working capital is a minor feature of the balance sheet, as expected for a leasing business with no inventory; current liabilities exceeded current assets in three of the past five years, a common and not inherently concerning pattern for REITs that rely on continuous access to debt markets to refinance current maturities rather than funding them from a working-capital buffer. Potential red flags include the still-elevated net debt/EBITDA ratio of 7.1 times at fiscal year-end 2025 (up from 5.9 times in fiscal 2024, reflecting both the EBITDA distortion discussed in Section C1 and continued net debt issuance) and a goodwill and intangible-asset balance of \$26.8 billion, or 42.4% of total assets, which would be vulnerable to further impairment in a scenario of sustained underperformance in any of the company's international segments, though no such impairment is currently indicated by recent results.

C3. Cash Flow Statement

Figure C3.1: Operating cash flow, capital expenditure and free cash flow, FY2021-FY2025

Source: OCAD calculation from SEC-filing-derived cash flow statement data (Alpha Vantage).

TABLE C3.1: CASH FLOW SUMMARY (\$ MILLIONS)

Fiscal year	2021	2022	2023	2024	2025
Operating cash flow	4,819.9	3,696.2	4,722.4	5,290.5	5,464.0
Capital expenditure	1,376.7	1,873.6	1,798.1	1,590.0	1,680.4
Free cash flow	3,443.2	1,822.6	2,924.3	3,700.5	3,783.6
Free cash flow margin	36.8%	18.9%	29.2%	36.5%	35.5%

Fiscal year	2021	2022	2023	2024	2025
Dividends paid	2,271.0	2,630.4	2,949.3	3,074.9	3,157.2
OCF / net income (cash conversion)	1.88x	2.09x	3.18x	2.35x	2.16x

Sourced and Calculated: operating cash flow, capital expenditure and dividends paid are as reported; free cash flow, margins and cash conversion are calculated by OCAD.

Free cash flow of \$3,783.6 million in fiscal 2025 comfortably exceeded dividends paid of \$3,157.2 million, a coverage ratio of 1.2 times, though dividends are paid against AFFO under REIT distribution practice rather than against free cash flow as defined here; on that basis, the FY2025 AFFO payout ratio was approximately 63% of AFFO per share (\$6.80 of distributions against \$10.76 of AFFO per share), leaving a comfortable cushion for continued dividend growth without incremental leverage, all else equal. Cash conversion (operating cash flow divided by net income) has been persistently above 1.8 times every year in the sample and well above 1.0 times, the clearest evidence that **net income materially understates American Tower's cash generation**, principally because depreciation and amortisation, a large non-cash charge on this asset-heavy balance sheet, exceeds maintenance-level reinvestment needs by a wide margin. Working-capital effects on cash flow have been immaterial in each of the past five years, consistent with the business's lease-based, low-inventory operating model.

Figure C3.2: AFFO per share and dividend per share, FY2021-FY2025

Source: American Tower fourth-quarter and full-year earnings releases, FY2021-FY2025 (Sourced); dividend figures cross-checked against ex-dividend-date distribution data.

C4. Forecasting and Projections

Management's own fiscal 2026 guidance, issued alongside fiscal 2025 results (company-reported), calls for total property revenue of \$10,440 million to \$10,590 million (approximately flat to down 2% versus fiscal 2025 total property revenue of \$10,305 million restated for the property-revenue-only basis used in guidance), adjusted EBITDA of \$7,090 million to \$7,160 million (essentially flat, a -0.1% midpoint change versus the company's own fiscal 2025 adjusted EBITDA of \$7,130 million), and AFFO per share of \$10.78 to \$10.95 (0.2% to 1.8% growth versus fiscal 2025's \$10.76). This guided pause, described in outside commentary as a 2026 "growth trough," follows several years of high-single-digit AFFO-per-share growth and reflects a combination of lease-renewal timing, the tail-end of the India-divestiture transition, and a temporary moderation in U.S. tower-leasing volume ahead of an anticipated re-acceleration tied to continued 5G densification and artificial-intelligence-driven data-centre demand.

For the explicit forecast period beyond fiscal 2026, this report constructs three OCAD-built scenarios rather than adopting management guidance beyond the one year for which it has been given, since revenue, margin and capital-expenditure assumptions for out-years are inherently estimates rather than reported facts.

TABLE C4.1: FIVE-YEAR SCENARIO ASSUMPTIONS AND OUTPUTS (REASONED: OCAD ASSUMPTIONS, NOT COMPANY GUIDANCE BEYOND FY2026)

Scenario	Revenue growth (annual)	EBIT margin (terminal)	Capex (% of revenue)	Driver
Bull case	5.5%	40.0%	15.0%	Faster CoreSite scale-up on AI-driven demand; accelerated 5G densification; disciplined leverage
Base case	3.5%	38.5%	15.5%	Continuation of recent organic tenant billings growth; gradual CoreSite ramp; stable leverage
Bear case	1.5%	35.0%	17.0%	Carrier consolidation pressures tenant count; higher-for-longer rates raise refinancing cost; slower CoreSite adoption

Working-capital requirements are structurally minor for this business, as noted in Section C3, and are not separately modelled. Capital expenditure in all three scenarios includes both maintenance and growth spending, since American Tower does not disclose a clean split between the two; this is a conservative simplification discussed further in Section C5.

C5. Discounted Cash Flow (DCF) Model

The DCF model discounts unlevered free cash flow (after-tax EBIT, plus depreciation and amortisation, less total capital expenditure) over an explicit five-year window, applying a Gordon-growth terminal value. Assumptions are as follows, all labelled as OCAD estimates rather than reported figures:

Assumption	Value	Basis
Risk-free rate	5.0%	Approximate 10-year U.S. Treasury yield, September 2026 (Sourced, market data)
Equity risk premium	4.5%	Reasoned: long-run U.S. equity risk premium assumption
Beta	0.895	Sourced, data provider
Cost of equity (CAPM)	9.0%	Calculated: risk-free rate + beta × equity risk premium
Pre-tax cost of debt	6.5%	Reasoned: approximate spread for a Baa3/BBB--rated issuer over the risk-free rate
Effective tax rate	15.0%	Reasoned, close to the FY2025 effective rate of 14.1%
Capital structure (E/D by market value)	65% / 35%	Calculated from market capitalisation and net debt at 23 September 2026
WACC	7.8%	Calculated
Terminal growth rate	2.5%	Reasoned: approximate long-run nominal GDP growth proxy

TABLE C5.1: DCF OUTPUTS BY SCENARIO

Scenario	Enterprise value (\$bn)	Equity value (\$bn)	Implied value per share
Bull case	110.9	67.4	\$143.62
Base case	79.0	35.5	\$75.72
Bear case	52.7	9.2	\$19.68

TABLE C5.2: SENSITIVITY: IMPLIED VALUE PER SHARE, BASE-CASE REVENUE/MARGIN PATH, BY WACC AND TERMINAL GROWTH

WACC \ Terminal growth	1.5%	2.0%	2.5%	3.0%
6.8%	\$82	\$97	\$115	\$138
7.3%	\$67	\$79	\$93	\$111
7.8%	\$54	\$64	\$76	\$90
8.3%	\$43	\$51	\$61	\$73
8.8%	\$34	\$41	\$49	\$59

This DCF model, which conservatively deducts total capital expenditure (growth and maintenance combined, since a clean split is not disclosed) from after-tax EBIT plus depreciation and amortisation, produces a base-case value of approximately \$76 per share, materially below the \$170.78 closing price on 23 September 2026, with a bull-case value of approximately \$144 per share still below the market quote. This gap should not be read as a simple conclusion that the stock is overvalued; rather, it reflects three identifiable factors. First, deducting all capital expenditure understates distributable cash flow to the extent a meaningful share of that spending is growth rather than maintenance capital, a distinction the REIT industry's AFFO metric is specifically designed to make and which this unlevered-FCF approach, by design, does not. Second, the market may be applying a lower effective discount rate to these long-duration, contractually escalating lease cash flows than the 9.0% CAPM-based cost of equity used here, which is a generic equity-market assumption rather than one calibrated specifically to REIT lease cash-flow risk. Third, the market may be pricing optionality in the CoreSite data-centre platform beyond what a base-case five-year explicit forecast credits. Readers should therefore treat the multiples-based valuation in Section B3, benchmarked against Crown Castle and SBA Communications, as the more directly comparable valuation lens for this asset class, and this DCF as a supplementary, deliberately conservative cross-check rather than a competing point estimate of intrinsic value.

C6. Leveraged Buyout (LBO) Model

A conventional leveraged buyout framework is of limited applicability to American Tower. The company is already one of the largest REITs in the world by enterprise value (approximately \$124.9 billion calculated), carries REIT-level leverage of approximately 7 times EBITDA (near or above levels a private-equity sponsor would typically add on top of an existing capital structure), and operates in a sector where its two closest scaled competitors are of insufficient combined size to plausibly finance a take-private transaction at a premium without extraordinary capital-markets support. For these reasons, this report does not construct a standalone LBO model; the DCF and multiples-based analyses in Sections B3 and C5 are the more relevant valuation frameworks for a company of this scale and capital structure.

D. Investment Thesis

Bull Case

American Tower materially outperforms current expectations if the CoreSite data-centre platform scales faster than the base case assumes, driven by artificial-intelligence and hybrid-cloud workload growth that lifts data-centre revenue well above its current roughly 10% share of property revenue; if U.S. and international tower organic tenant billings growth reaccelerates toward the high-single-digit rates achieved earlier in the decade as 5G densification resumes; and if the company continues to reduce net debt/EBITDA from the current 7.1 times toward the lower end of its historical range, allowing both margin expansion from operating leverage and a re-rating of the equity toward the multiple SBA Communications commands. In this scenario, the DCF bull case in Section C5 implies a value near \$144 per share, and continued double-digit dividend growth would be plausible.

Bear Case

The thesis breaks down if carrier consolidation or aggressive network-sharing arrangements reduce the average number of paying tenants per tower structurally rather than temporarily; if long-term interest rates remain elevated or rise further, simultaneously increasing the cost of refinancing approximately \$45 billion of debt and compressing the multiple investors are willing to pay for REIT distributable cash flow; if the CoreSite platform requires materially higher ongoing capital intensity than assumed without a commensurate acceleration in revenue; or if renewed currency or political disruption in the remaining Latin American and African portfolio (a smaller, but still material, share of revenue following the India exit) pressures international segment cash flow. In this scenario, the DCF bear case in Section C5 implies a value near \$20 per share, and a dividend cut, while not indicated by current coverage ratios, would become a live risk if leverage rose meaningfully further.

Base Case

The most reasonable scenario based on current information is continued low-single-digit total revenue growth in fiscal 2026 (consistent with management's own guidance of roughly flat to modestly higher property revenue), a stabilisation of adjusted EBITDA around the \$7.1 billion guided level, and a resumption of mid-single-digit percentage AFFO-per-share growth from fiscal 2027 as the 5G densification cycle continues and CoreSite contributes a growing share of incremental revenue. Leverage is likely to remain near 7 times calculated EBITDA over the next one to two years, with gradual improvement contingent on EBITDA growth outpacing further debt issuance. Dividend growth is likely to continue at a mid-single-digit percentage rate, broadly in line with AFFO-per-share growth, consistent with the company's payout ratio remaining near 60-65% of AFFO.

Catalysts

QUARTERLY EARNINGS

Each quarterly release will update organic tenant billings growth and CoreSite bookings, the two most closely watched operating metrics for this business.

RATE ENVIRONMENT

A decline in long-term U.S. interest rates would both lower refinancing costs and likely support a re-rating of REIT equity multiples generally.

DATA-CENTRE DEMAND

Continued disclosure of AI- and hybrid-cloud-related bookings at CoreSite facilities is the clearest near-term signal of whether the data-centre growth thesis is tracking ahead of or behind plan.

CAPITAL ALLOCATION	Continued net debt reduction, or conversely any large debt-funded acquisition, would meaningfully change the leverage and risk profile described in this report.
CARRIER CAPITAL SPENDING	Announcements of accelerated 5G mid-band or early 6G-related capital-spending plans by major carriers would be a positive read-through to tower leasing demand.

Things to Monitor

TABLE D.1: MONITORING LIST

Metric or event	Why it matters	Positive signal	Negative signal
Organic tenant billings growth	Core measure of underlying tower-leasing demand, isolated from currency and portfolio changes	Sustained at or above the 5.1% FY2025 rate	Deceleration toward, or below, low single digits
Net debt / EBITDA	Determines refinancing risk and capacity for further growth investment	Trending down from the current 7.1 times	Rising further from current levels
CoreSite bookings and revenue growth	Principal new growth vector outside the mature core tower business	Growth accelerating above the roughly 10% property-revenue share	Growth stalling or requiring disproportionate incremental capital
AFFO per share growth	The REIT industry's primary distributable cash-flow metric and dividend-coverage basis	Resumption of mid-to-high single-digit growth beyond the FY2026 guided pause	A second consecutive year of flat or negative growth
Long-term interest rates	Drives both refinancing cost and the multiple applied to distributable cash flow	Stable or declining long-term rates	A sustained further increase in long-term yields

E. Final Investment Framework

BUSINESS QUALITY	High. Long-duration, contracted leasing of scarce, permitted real estate with strong incremental economics from co-location; the CoreSite acquisition adds a differentiated, digitally-oriented growth vector.
FINANCIAL QUALITY	Moderate. Strong and growing free cash flow and AFFO, comfortable dividend coverage, but a near-zero GAAP equity base and leverage at the higher end of the company's own five-year range.
COMPETITIVE POSITION	Strong. One of three scaled independent U.S. tower owners, with durable switching-cost-driven tenant retention; data-centre platform differentiates it from SBA Communications.
MANAGEMENT	Reasonable. A twenty-five-year company veteran as CEO, a demonstrated willingness to exit an underperforming market (India) rather than continue funding it, and continued dividend growth, though the CoreSite capital-allocation thesis is not yet fully proven at scale.
INDUSTRY	Mature in core U.S. towers, moderately cyclical around carrier spending cycles, with a growing digital-infrastructure adjacency in data centres.
VALUATION	Moderate. Price/AFFO of 15.9 times and EV/EBITDA of 16.8 times sit between the two closest listed peers; a conservative DCF cross-check implies materially lower values, a gap explained principally by the treatment of growth versus maintenance capital expenditure and by discount-rate assumptions rather than by an unambiguous overvaluation conclusion.
TECHNICAL AND MARKET STRUCTURE	Range-bound, trading below both the 50-day and 200-day moving averages and roughly 12% below the 52-week high, in a broader pattern shaped since 2022 by the interest-rate cycle affecting REITs generally.
PRINCIPAL RISK	A sustained rise in long-term interest rates that simultaneously raises refinancing costs on approximately \$45 billion of debt and compresses the multiple paid for distributable cash flow.
PRINCIPAL CATALYST	A resumption of mid-to-high single-digit AFFO-per-share growth beyond the guided fiscal 2026 pause, driven by continued 5G densification and CoreSite data-centre demand.
KEY VARIABLE	The pace and profitability of CoreSite data-centre revenue growth relative to the incremental capital it requires, since this is the variable most likely to determine whether American Tower returns to its historical high-single-digit AFFO growth rate or settles into a slower-growing, more mature profile.
THESIS INVALIDATION	The investment thesis would become materially weaker if organic tenant billings growth fell and remained below approximately 3% for more than two consecutive years, if net debt/EBITDA rose and remained above roughly 8 times without a clear deleveraging plan, or if the CoreSite segment failed to grow its share of property revenue beyond its current approximately 10% level within the next two to three years.

F. Data Table

TABLE F.1: STANDARDISED COMPANY SNAPSHOT

Category	Metric	Current (FY2025 / 23 Sep 2026)	Prior year (FY2024)	5-year trend (FY2021 to FY2025)
Market	Market capitalisation	\$81.7bn	n/a	n/a
Market	Enterprise value (calculated)	\$124.9bn	n/a	n/a
